Comprehensive Suicide Prevention:
Meeting the Mandates of AB 2246

Workshop Goals

- When you leave this workshop we hope that you will have …
  1. a better understand the term "suicide" and be able to differentiate it from other forms of self-injury
  2. appreciate the mandates of AB2246
  3. a better understanding suicide statistics and demographics, and appreciate how these data can inform risk assessments.
  4. considered a variety of primary prevention strategies.
  5. increased your knowledge of suicide risk assessment.
  6. increased your knowledge of how schools should intervene with the student at risk for suicidal behavior.
  7. increased your knowledge of how to respond to the aftermath of a suicide death.

2

Workshop Outline

- Suicide
  1. Definitions
  2. Prevention Policy (AB 2246)
  3. Statistics and Demographics
  4. Prevention
  5. Risk Assessment
  6. Intervention
  7. Postvention

3

Part 1

What is "suicide"

GOAL:
Understand the term "suicide" and be able to differentiate it from other forms of self-injury

4

Definitions

- Self-Directed Violence (SDV)
  - "Behavior that is self-directed and deliberately results in injury or the potential for injury to oneself."
    - Includes Non-Suicidal and Suicidal behaviors

5

Crosby, Ortega, & Melanson (2011, p. 21)

Definitions

- Non-Suicidal SDV(AKA self-mutilation, cutting, self-injury)
  - "Behavior that is self-directed and deliberately results in injury or the potential for injury to oneself. There is no evidence, whether implicit or explicit, of suicidal intent."
- Suicidal SDV
  - "Behavior that is self-directed and deliberately results in injury or the potential for injury to oneself. There is evidence, whether implicit or explicit, of suicidal intent."

6

Crosby, Ortega, & Melanson (2011, p. 21)

Definitions

- Non-Suicidal and Suicidal SDV
  - Similarities
    - Coping behaviors
      1. Suicide aims at eliminating overwhelming and intolerable pain
      2. Non-Suicidal SDV aims at managing pain
  - Differences
    - Death orientation
      1. Suicide associated with conscious thoughts of death
      2. Non-suicidal SDV not associated with conscious thoughts of death

7

Definitions

- Undetermined SDV
  - "Behavior that is self-directed and deliberately results in injury or the potential for injury to oneself. Suicidal intent is unclear based on the available evidence."

Crosby, Ortega, & Melanson (2011, p. 21)

8

Part 2

Pupil Suicide Prevention Policy (AB 2246)

GOAL:
Appreciate the mandates of AB 2246

9

AB 2246, O'Donnell. Pupil Suicide Prevention Policy

- **Author: Assemblymember Patrick O'Donnell, 70th District (D-Long Beach)**
  Cosponsors: Equality California, The Trevor Project
- **Legislation approved by Governor Brown and chaptered by Secretary of State Padilla: September 26, 2016**
- **Signed into law during National Suicide Prevention Awareness Month, AB 2246 represents an effort to address rising youth suicide rates.**

10

AB 2246, O'Donnell. Pupil Suicide Prevention Policy

- **Requirement of all local educational agencies (LEA): County Offices of Education, school districts, state special schools, or charter schools.**
- **The pupil suicide prevention policy must:**
  - Be implemented by all LEAs that serve 7th to 12th grade students before the beginning of the 2017-2018 school year. This means LEAs adopt their pupil suicide prevention policies prior to the commencement of the 2017-2018 school year (i.e. prior to July 1, 2017).
  - Be developed in consultation with school and community stakeholders, school employed mental health professionals, and suicide prevention experts and
  - Address procedures relating to suicide prevention, intervention, and postvention and
  - Adoption of policies occur at a regular (rather than a special) meeting.

11

AB 2246, O'Donnell. Pupil Suicide Prevention Policy

- **The pupil suicide prevention policy must specifically address:**
- **High-Risk Groups**
  - (A) Youth bereaved by suicide.
  - (B) Youth with disabilities, mental illness, or substance use disorders.
  - (C) Youth experiencing homelessness or in out-of-home settings, such as foster care.
  - (D) Lesbian, gay, bisexual, transgender, or questioning youth.
- **Suicide Awareness and Prevention Training**
  - Teachers of pupils in grades 7 to 12.
  - Identify appropriate mental health services: school-based and community services.
  - Instructions on how to refer to these services.
  - Self-review suicide awareness and prevention training materials.

12

AB 2246, O'Donnell. Pupil Suicide Prevention Policy

The pupil suicide prevention policy must specifically state:

- **School Employee**
  - Acts only within the authorization and scope of the employee's credential or license.
  - Not performing non-credentialed or licensed diagnosis or treatment.
- **The California Department of Education will**
  - Develop and maintain a model policy in accordance with this policy (AB 2246) to serve as a guide for local educational agencies.

13

AB 2246, O'Donnell. Pupil Suicide Prevention Policy

- **Commission on State Mandates (CSM) for cost reimbursements**
  "If the Commission on State Mandates determines that this act contains costs mandated by the state, reimbursement to local agencies and school districts for those costs shall be made pursuant to Part 7 (commencing with Section 17500) of Division 4 of Title 2 of the Government Code."
  - No guaranteed costs repayments.
  - LEAs with a policy? Possible incremental reimbursement.
  - LEAs without a policy? Reasonable costs reimbursement.
  - The CSM decision making is on a case by case basis.

14

Policy, Procedures, and Administrative Regulations

- **LEA Board Policies and procedures authorize and direct the governing actions within a school district**. In this case, the student suicide prevention policies should be clearly defined for students, parents, staff, and community stakeholders.
- **Policies and procedures help avoid legal liabilities**
  - *Student Suicide: Could You Be Held Liable?*
  - *Student Suicides and School System Liability*
- **The CDE Model Policy will not only meet the minimum requirements of AB 2246, but also give LEAs best practice guidance.**

Cafaro. C.S. (2000). *Student suicides and school system liability.* School Law bulletin, 2(3), 17-25.
Taylor, K.R. (2001). *Student suicide: Could you be held liable?* Principal Leadership, 2(1), 74-78.

15

Policy, Procedures, and Administrative Regulations

- **Go to Board Policy Section of your School Board of Education website**
  - Use Gamut (an online tool that tracks school district's policies), if available, to access

gamutonline

  - Check for BP 5141.52 and AR 5141.52. The California School Board Association (CSBA) provides templates for:
    - Standard suicide prevention Board Policy (BP 5141.52)
    - Administrative Regulation (AR 5141.52)
- **While CSBA's templates may be used as a starting point, it should be cautioned that this policy, in its current form, may not meet all the requirements of AB 2246.**

16

Complying with AB 2246

- **LEAs <u>without</u> an existing suicide prevention policy:**
  - Find guidance from a soon-to-be released California Department of Education model policy
  - Develop a policy that includes all AB 2246 criteria
  - LEAs can add more than the minimum criteria as in best practices
  - You can refer to ***A Model School Policy on Suicide Prevention: Model language, commentary, and resources.***

OR

- **LEAs <u>with</u> an existing suicide prevention policy:**
  - Review to see if it complies with AB 2246 criteria
  - Modify/amend to comply with AB 2246 criteria

American Foundation for Suicide Prevention (AFSP), American School Counselors Association (ASCA), National Association of School Psychologists (NASP), & The Trevor Project (2014). *A model school policy on suicide prevention: Model language, commentary, and resources.*

17

Part 3

Suicide Statistics and Demographics

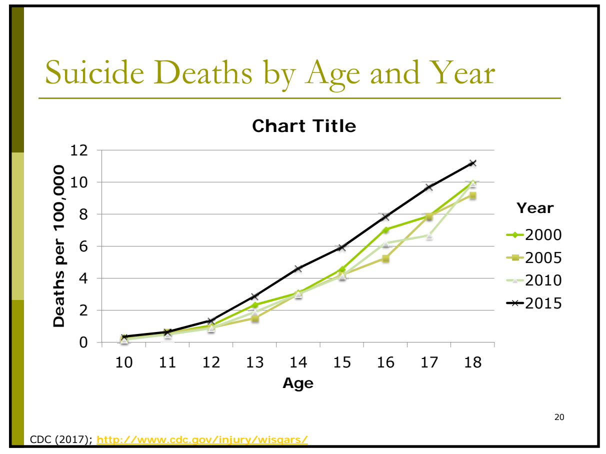
GOAL:
Have a better understanding suicide statistics and demographics, and appreciate how these data can inform risk assessments

18

Statistics & Demographics (2015)

Age in Years	Deaths	Cause of Death Rank	Suicide Rate
5 to 7	0		
8	1	19	0.02
9	1	17	0.02
10	15	5	0.36
11	27	4	0.65
12	56	3	1.37
13	118	2	2.89
14	193	2	4.61
15	252	2	5.93
16	328	2	7.84
17	406	2	9.68
18	472	2	11.19
Total	**1,871**	**2**	**3.23**

CDC (2017); http://www.cdc.gov/injury/wisqars/

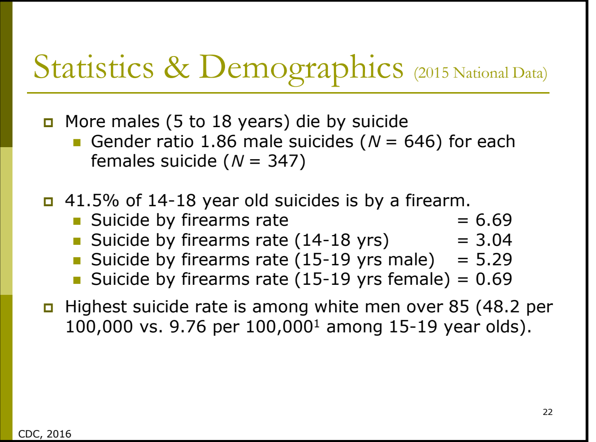


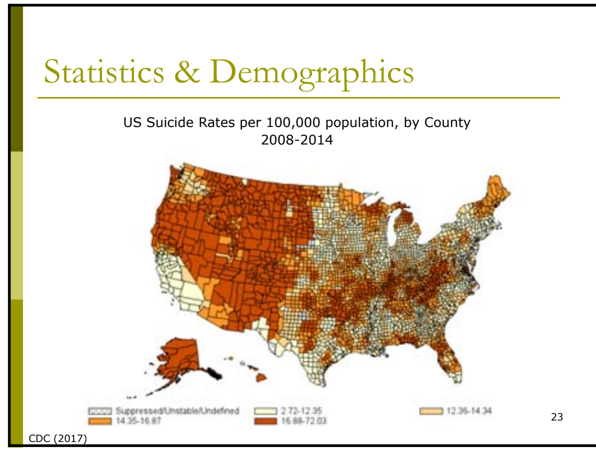
Statistics & Demographics

- Magnitude of the problem
  - Suicidal SDV among high school students in 2015[1]
    - 17.7% seriously considered suicide
    - 14.6% made a suicide plan
    - 8.6% attempted suicide
    - 2.8% attempt required medical attention
  - 100 to 200 attempts for each suicide death.[2]

21

[1]Kann et al. (2016); [2]Drapeau & McIntosh (2015)





Statistics & Demographics (2015 rankings,)

Suicide Deaths by State (5 to 24 year olds)

Rank	State	*N*	Rate
1	Alaska	60	28.38
2	South Dakota	44	18.74
3	Wyoming	27	17.20
4	New Mexico	80	14.12
5	Colorado	183	12.60
6	Montana	33	12.44
7	Utah	123	12.27
8	Idaho	56	11.77
9	Hawaii	41	11.56
10	Oklahoma	105	9.69
	United States	**5,904**	**6.95**
46	California	506	4.8

Suicide Prevention:
Suicide Prevention Policy

It is the policy of the Governing Board that all staff members learn how to recognize students at risk, to identify warning signs of suicide, to take preventive precautions, and to report suicide threats to the appropriate parental and professional authorities.

Administration shall ensure that all staff members have been issued a copy of the District's suicide prevention policy and procedures. All staff members are responsible for knowing and acting upon them.

Suicide Prevention:
Suicide Prevention Curriculum

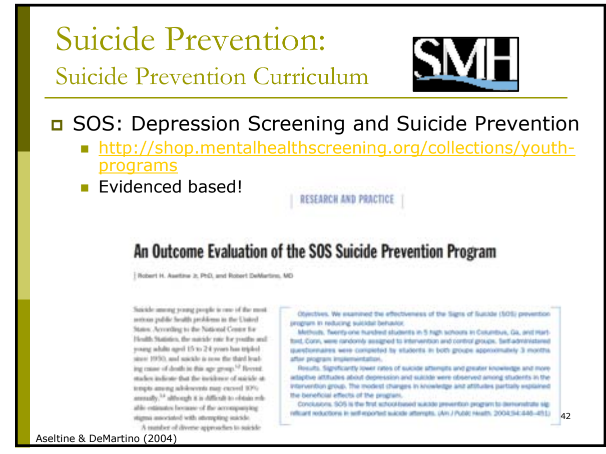
SMH

- SOS: Depression Screening and Suicide Prevention
  - http://shop.mentalhealthscreening.org/collections/youth-programs
  - "The main teaching tool of the SOS program is a video that teaches students how to identify symptoms of depression and suicidality in themselves or their friends and encourages help-seeking. The program's primary objectives are to educate teens that depression is a treatable illness and to equip them to respond to a potential suicide in a friend or family member using the SOS technique. SOS is an action-oriented approach instructing students how to **ACT** (**A**cknowledge, **C**are and **T**ell) in the face of this mental health emergency."

SOS Signs of Suicide® High School Program $395

SOS Signs of Suicide® Middle School Program $395

41



Suicide Prevention:
Suicide Prevention Screening

- School-wide Screening
  - Very few false negatives
  - Many false positives
    - Requires second-stage evaluation
- Limitations
  - Risk waxes and wanes
  - Principals' view of acceptability
  - Requires effective referral procedures
- Possible Tool
  - Suicidal Ideation Questionnaire
  - Author: William Reynolds
  - Publisher: Psychological Assessment Resources

43

Gould & Kramer (2001)

Suicide Prevention:
Suicide Prevention: Gatekeeper Training

- Training natural community caregivers
  - (e.g., Suicide Intervention Training)
- Advantages
  - Reduced risk of imitation
  - Expands community support systems
- Research is limited but promising
  - Durable changes in attitudes, knowledge, intervention skills

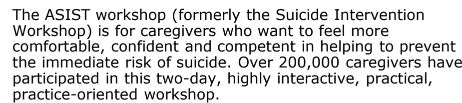
47

Gould & Kramer (2001)

Suicide Prevention:
Suicide Prevention: Gatekeeper Training

A Specific Training Program:

- Applied Suicide Intervention Skills Training
  - Author: Ramsay, Tanney, Tierney, & Lang
  - Publisher: LivingWorks Education, Inc
  - 1-403-209-0242
  - http://www.livingworks.net/



- The ASIST workshop (formerly the Suicide Intervention Workshop) is for caregivers who want to feel more comfortable, confident and competent in helping to prevent the immediate risk of suicide. Over 200,000 caregivers have participated in this two-day, highly interactive, practical, practice-oriented workshop.
- Training for Trainers is a (minimum) five-day course that prepares local resource persons to be trainers of the ASIST workshop. Around the world, there is a network of 1000 active, registered trainers.

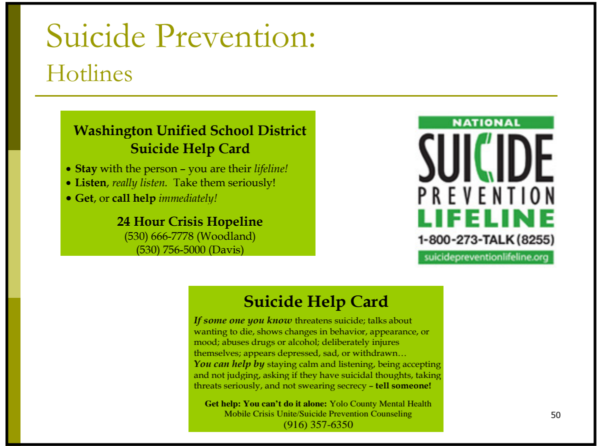
48

Suicide Prevention:
Hotlines

- Rationale
  - Suicidal ideation is associated with crisis
  - Suicidal ideation is associated with ambivalence
  - Special training is requires to respond to "cries for help"
- Likely benefit those who use them
- Limitations
  - Limited research regarding effectiveness
  - Few youth use hotlines
  - Youth are less likely to be aware of hotlines
  - Highest risk youth are least likely to use

Gould & Kramer (2001)

49



Suicide Prevention:
Hotlines

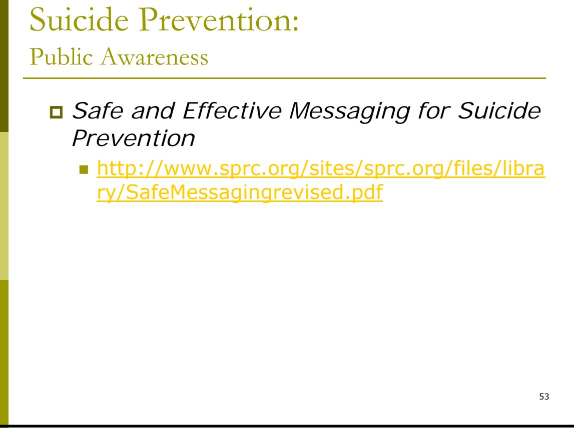
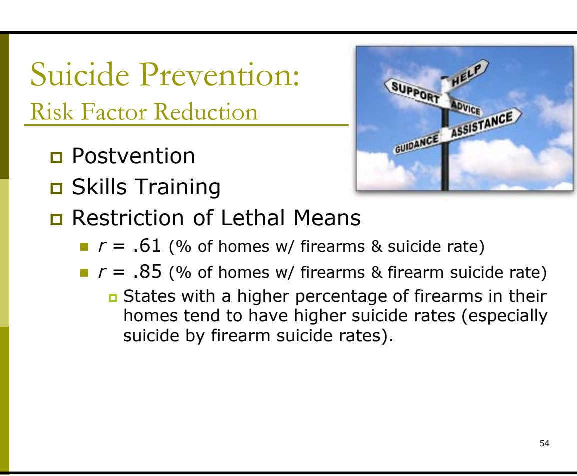
52



Suicide Prevention:
Public Awareness

- *Safe and Effective Messaging for Suicide Prevention*
  - http://www.sprc.org/sites/sprc.org/files/library/SafeMessagingrevised.pdf

53

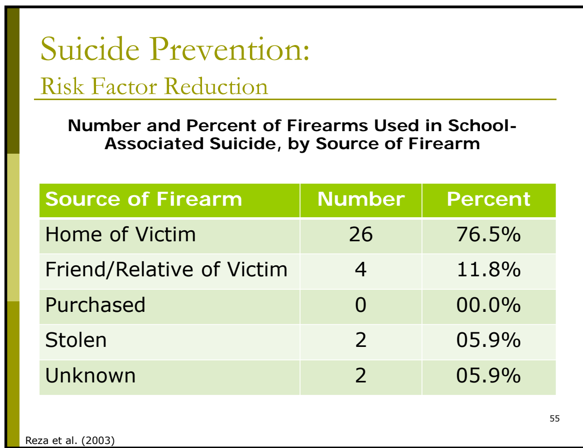


Suicide Prevention:
Risk Factor Reduction

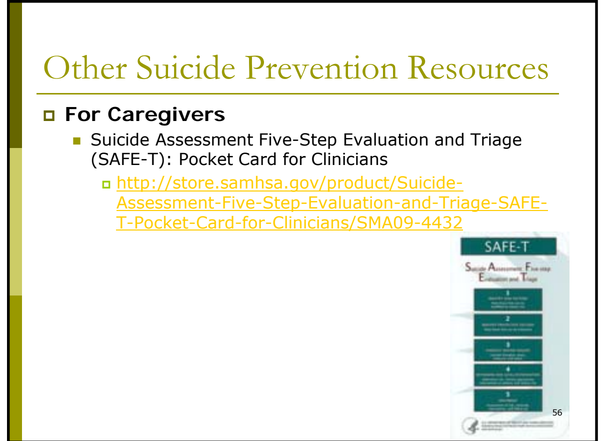
- Postvention
- Skills Training
- Restriction of Lethal Means
  - *r* = .61 (% of homes w/ firearms & suicide rate)
  - *r* = .85 (% of homes w/ firearms & firearm suicide rate)
    - States with a higher percentage of firearms in their homes tend to have higher suicide rates (especially suicide by firearm suicide rates).

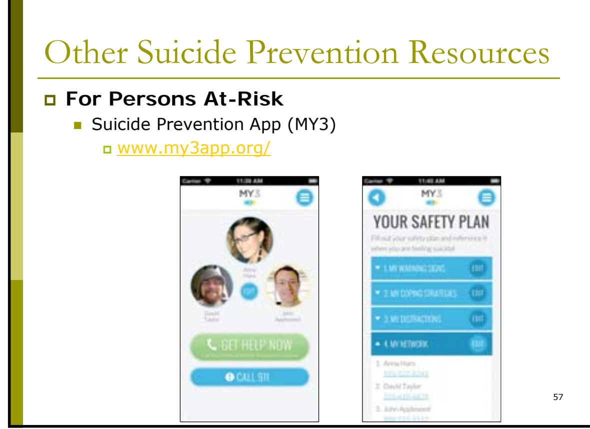
54

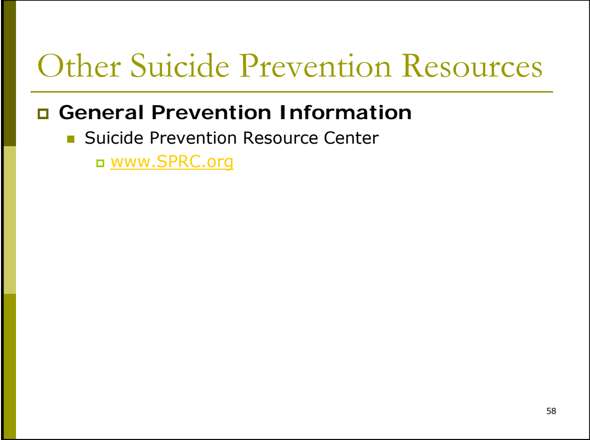
Stephen E. Brock, PhD, NCSP, LEP
Richard Lieberman, NCSP
Susan K. Coats, EdD, LEP

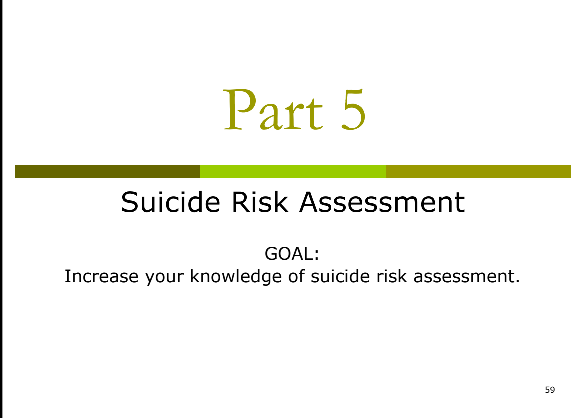


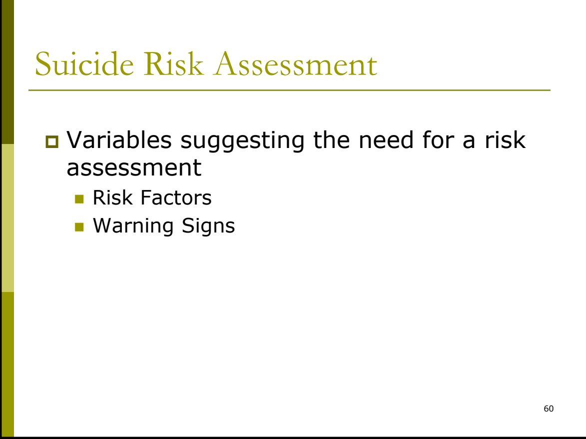
Source of Firearm	Number	Percent
Home of Victim	26	76.5%
Friend/Relative of Victim	4	11.8%
Purchased	0	00.0%
Stolen	2	05.9%
Unknown	2	05.9%









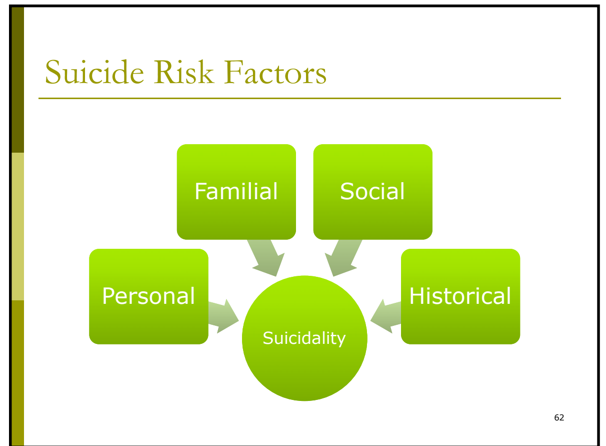


Suicide Risk Assessment

- Risk Factors
  - Risk factors are variables, which when present, simply increase the odds of suicidal ideation and behavior
    - Risk factors are far from perfect predictors of the presence of suicidal thoughts, suicide attempts, or suicide deaths
  - Pathways to suicidal ideation and behavior are idiosyncratic
    - Suicidal ideation and behaviors are typically the result of interactions among a number of different factors
    - Generally speaking these factors can be categorized as personal, familial, social, and historical

61

Suicide Risk Factors



62

Suicide Risk Factors: Children

- Suicide is rare among children under age 15
- Suicide is practically unheard of under the age of 10
- Childhood can be considered a protective factor
  - Very young children have difficulty cognitively understanding death
  - Psychopathology is more common in later adolescence
  - Alcohol and substance abuse less common
  - Less access to guns

63

Johnson et al. (2006); Pfeffer (1997); Shaffer et al. (1996); Soole et al. (2015)

Suicide Risk Factors: Children

- However…
  - Most children have an understanding of death and the concept of suicide by 8 years
  - Many are capable of planning, attempting, and dying by suicide
  - Suicide is a leading cause of death among children 10 to 14 years (N= 425 in 2014, second leading cause of death)
  - Each year a small number of under age 10 years to die by suicide (N = 3 in 2014)
  - In community samples rates of suicidal ideation among children range from 6% to 15%
- Thus, even though it is rare it is important to attend to risk factors for childhood suicidality

64

CDC (2016); Ridge Anderson et al. (2016); Soole et al. (2015)

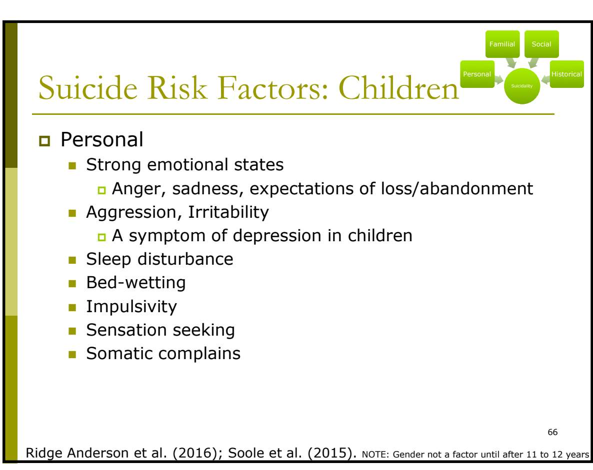
Suicide Risk Factors: Children

- Personal
  - Psychopathology
    - Depression, ADHD and other disruptive behavior disorders
      - Relative to adults and adolescents lower rates of mental illness are seen among suicidal children
  - Negative emotional states
    - Worthlessness and negative automatic thought processes
  - Hopelessness
    - May be specific to ideation and not behavior
  - Low self-esteem
    - in the context of high depression

65

Ridge Anderson et al. (2016); Soole et al. (2015)

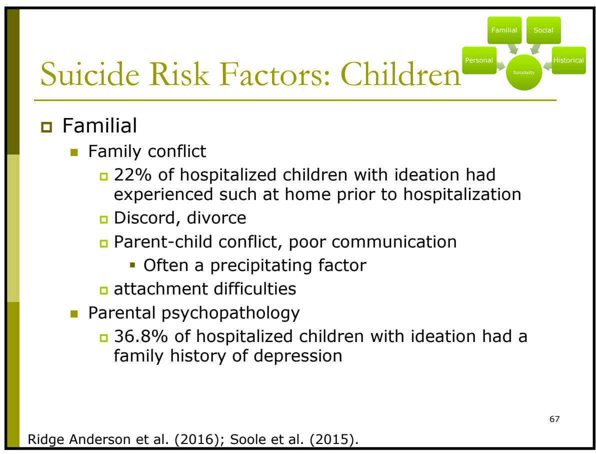
Suicide Risk Factors: Children



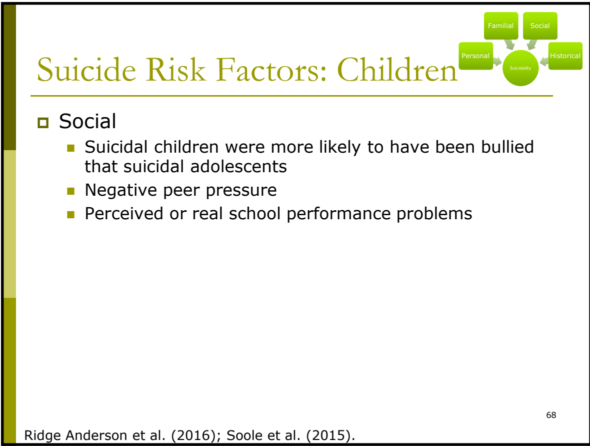
- Personal
  - Strong emotional states
    - Anger, sadness, expectations of loss/abandonment
  - Aggression, Irritability
    - A symptom of depression in children
  - Sleep disturbance
  - Bed-wetting
  - Impulsivity
  - Sensation seeking
  - Somatic complains

66

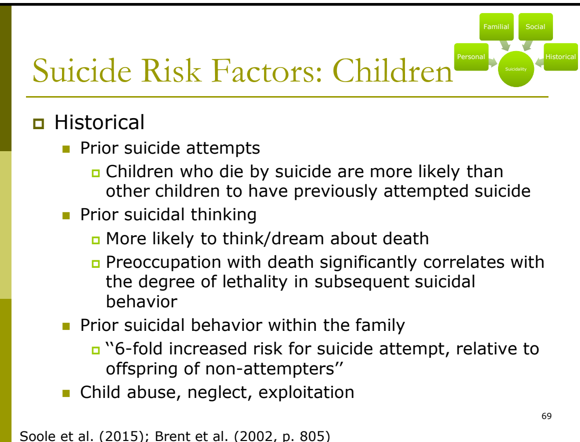
Ridge Anderson et al. (2016); Soole et al. (2015). NOTE: Gender not a factor until after 11 to 12 years



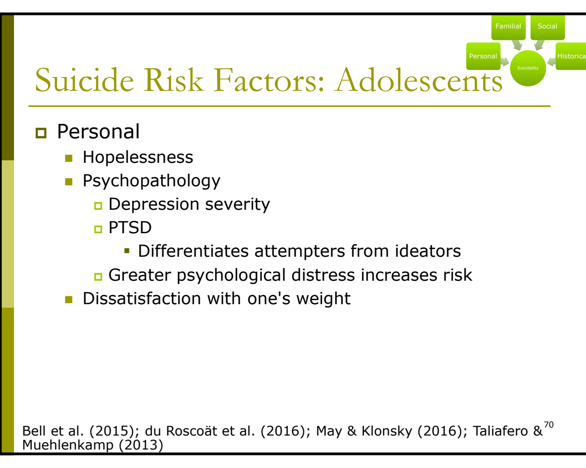
Suicide Risk Factors: Children
Familial
Family conflict
22% of hospitalized children with ideation had experienced such at home prior to hospitalization
Discord, divorce
Parent-child conflict, poor communication
Often a precipitating factor
attachment difficulties
Parental psychopathology
36.8% of hospitalized children with ideation had a family history of depression
Ridge Anderson et al. (2016); Soole et al. (2015).
67



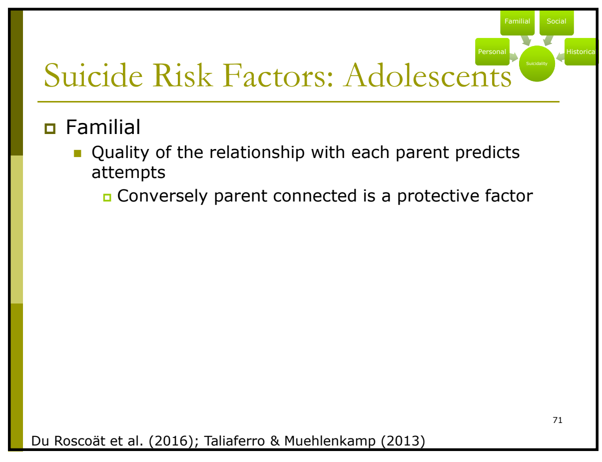
Suicide Risk Factors: Children
Social
Suicidal children were more likely to have been bullied that suicidal adolescents
Negative peer pressure
Perceived or real school performance problems
Ridge Anderson et al. (2016); Soole et al. (2015).
68



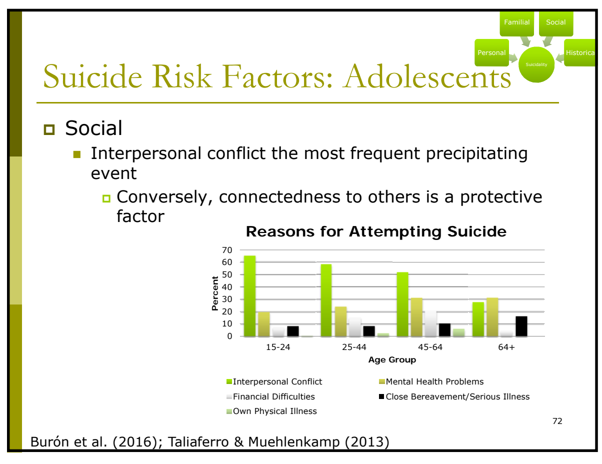
Suicide Risk Factors: Children
Historical
Prior suicide attempts
Children who die by suicide are more likely than other children to have previously attempted suicide
Prior suicidal thinking
More likely to think/dream about death
Preoccupation with death significantly correlates with the degree of lethality in subsequent suicidal behavior
Prior suicidal behavior within the family
"6-fold increased risk for suicide attempt, relative to offspring of non-attempters"
Child abuse, neglect, exploitation
Soole et al. (2015); Brent et al. (2002, p. 805)
69



Suicide Risk Factors: Adolescents
Personal
Hopelessness
Psychopathology
Depression severity
PTSD
Differentiates attempters from ideators
Greater psychological distress increases risk
Dissatisfaction with one's weight
Bell et al. (2015); du Roscoät et al. (2016); May & Klonsky (2016); Taliafero & Muehlenkamp (2013)
70



Suicide Risk Factors: Adolescents
Familial
Quality of the relationship with each parent predicts attempts
Conversely parent connected is a protective factor
Du Roscoät et al. (2016); Taliaferro & Muehlenkamp (2013)
71



Suicide Risk Factors: Adolescents
Social
Interpersonal conflict the most frequent precipitating event
Conversely, connectedness to others is a protective factor
Reasons for Attempting Suicide
Percent
Age Group
15-24
25-44
45-64
64+
Interpersonal Conflict
Mental Health Problems
Financial Difficulties
Close Bereavement/Serious Illness
Own Physical Illness

2	Hopelessness	2.82
3	Depressive symptoms	1.09
4	Mental health problem	095
5	Ran away from home	0.75
6	Sexual abuse	0.51

78

Taliafero & Muehlenkamp (2013)

Suicide Risk Factors: Adolescents

Risk Factors Differentiating ***Female*** Adolescents With ***Suicide Attempts*** From Those With ***No Suicidality***

Rank	Risk Factor	Effect Size
1	Hopelessness	3.44
2	Self Injury	2.63
3	Mental health problem	1.00
4	Ran away from home	0.86
5	Depressive symptoms	0.74
6	Stress or anxiety	0.66

79

Taliafero & Muehlenkamp (2013)

Suicide Risk Assessment

- Warning Signs
  - Variables that signal the possible presence of suicidal thinking.
    - Especially when combined with risk factors, warning signs indicate the need for a suicide risk assessment

80

Suicide Risk Assessment

- Warning Signs
  - Direct threats
    - "I have a plan to kill myself"

81

Suicide Risk Assessment

- Warning Signs
  - Indirect threats
    - "I wish I could fall asleep and never wake up"
    - "Everybody would be better off if I just weren't around"
    - "I'm not going to bug you much longer"
    - "I hate my life. I hate everyone and everything"
    - "I'm the cause of all of my family's/friend's troubles"
    - "I wish I would just go to sleep and never wake up"
    - "I've tried everything but nothing seems to help"
    - "Nobody can help me"
    - "I want to kill myself but I don't have the guts"
    - "I'm no good to anyone"
    - "If my (mom, dad, teacher) doesn't leave me alone I'll kill myself"
    - "Don't buy me anything. I won't be needing any (clothes, books)"

82

Suicide Risk Assessment

- Warning Signs
  - Behavioral indicators
    - Writing of suicidal notes
    - Making final arrangements
    - Giving away prized possessions
    - Talking about death
    - Reading, writing, and/or art about death
    - Hopelessness or helplessness
    - Social Withdrawal and isolation
    - Lost involvement in interests & activities
    - Increased risk-taking
    - Heavy use of alcohol or drugs

83

Suicide Risk Assessment

- Asking the "S" Question
  - The presence of suicide warning signs, especially when combined with suicide risk factors generates the need to conduct a suicide risk assessment.
  - A risk assessment begins with asking if the student is having thoughts of suicide.

84

Suicide Risk Assessment

- Be direct when asking the "S" question.
  - **BAD**
    - *You're not thinking of hurting yourself, are you?*
  - **Better**
    - *Are you thinking of harming yourself?*
  - **BEST**
    - *Sometimes when people have had your experiences and feelings they have thoughts of suicide. Is this something that you're thinking about?*

85

Suicide Risk Assessment

- Predicting Suicidal Behavior (CPR++)
  - Current plan (greater planning = greater risk).
    - How (method of attempt)?
    - How soon (timing of attempt)?
    - How prepared (access to means of attempt)?
  - Pain (unbearable pain = greater risk)
    - How desperate to ease the pain?
      - Person-at-risk's perceptions are key
  - Resources (more alone = greater risk)
    - Reasons for living/dying?
      - Can be very idiosyncratic
      - Person-at-risk's perceptions are key

86

Ramsay, Tanney, Lang, & Kinzel (2004)

Suicide Risk Assessment

- Predicting Suicidal Behavior (CPR++)[1]
  - (+) Prior Suicidal Behavior?
    - of self (40 times greater risk)
    - of significant others
    - An estimated 26-33% of adolescent suicide victims have made a previous attempt[2]
  - (+) Mental Health Status?
    - history mental illness (especially mood disorders)
    - linkage to mental health care provider

87

[1]Ramsay, Tanney, Lang, & Kinzel (2004); [2]American Foundation for Suicide Prevention (1996)

Suicide Risk Assessment Summary Sheet

Instructions: When a student acknowledges having suicidal thoughts, use as a checklist to assess suicide risk. Items are listed in order of importance to the Risk assessment.

		Risk present, but lower	*Medium Risk*	*Higher Risk*
1.	Current Suicide Plan A. Details B. How prepared C. How soon D. How (Lethality of method) E. Chance of intervention	____Vague. ____Means not available. ____No specific time. ____Pills, slash wrists. ____Others present most of the time.	____Some specifics. ____Has means close by. ____Within a few days or hours. ____Drugs/alcohol, car wreck. ____Others available if called upon.	____Well thought out. ____Has means in hand. ____Immediately. ____Gun, hanging, jumping. ____No one nearby; isolated.
2.	Pain	____Pain is bearable. ____Wants pain to stop, but not desperate. ____Identifies ways to stop the pain.	____Pain is almost unbearable. ____Becoming desperate for relief. ____Limited ways to cope with pain.	____Pain is unbearable. ____Desperate for relief from pain. ____Will do anything to stop the pain.
3.	Resources	____Help available; student acknowledges that significant others are concerned and available to help.	____Family and friends available, but are not perceived by the student to be willing to help.	____Family and friends are not available and/or are hostile, injurious, exhausted.
4.	Prior Suicidal Behavior of… A. Self B. Significant Others	____No prior suicidal behavior. ____No significant others have engaged in suicidal behavior.	____One previous low lethality attempt; history of threats. ____Significant others have recently attempted suicidal behavior.	____One of high lethality, or multiple attempts of moderate lethality. ____Significant others have recently committed suicide.
5.	Mental Health A. Coping behaviors B. Depression C. Medical status D. Other Psychopathology	____History of mental illness, but not currently considered mentally ill. ____Daily activities continue as usual with little change. ____Mild, feels slightly down. ____No significant medical problems. ____Stable relationships, personality, and school performance.	____Mentally ill, but currently receiving treatment. ____Some daily activities disrupted, disturbance in eating, sleeping, and schoolwork. ____Moderate, some moodiness, sadness, irritability, loneliness, and decrease of energy. ____Acute, but short-term, or psychosomatic illness. ____Recent acting-out behavior and substance abuse; acute suicidal behavior in stable personality.	____Mentally ill and not currently receiving treatment. ____Gross disturbances in daily functioning. ____Overwhelmed with hopelessness, sadness, and feelings of helplessness. ____Chronic debilitating, or acute catastrophic, illness. ____Suicidal behavior in unstable personality; emotional disturbance; repeated difficulty with peers, family, and teacher.
6.	Stress	____No significant stress.	____Moderate reaction to loss and environmental changes.	____Severe reaction to loss or environmental changes.
Total Checks				

See Handout

Risk Assessment

- Suicide intervention script and role play observation form

89

See Handout

Risk Assessment

- Questions to ask in the evaluation of suicidal risk in **children**
  1. *Suicidal fantasies or actions*:
     Have you ever thought of hurting yourself?
     Have you ever threatened or attempted to hurt yourself?
     Have you ever wished or tried to kill yourself?
     Have you ever wanted to or threatened to commit suicide?
  2. *Concepts of what would happen*:
     What did you think would happen if you tried to hurt or kill yourself?
     What did you want to have happen?
     Did you think you would die?
     Did you think you would have severe injuries?

90

Part 6

School-Based Suicide Intervention

GOAL:
Increase your knowledge of how schools should intervene with the student at risk for suicidal behavior.

91

School-Based Suicide Intervention

- General Staff Procedures for Responding to a Suicide Threat
  - The actions all school staff members are responsible for knowing and taking whenever suicide warning signs are displayed.
- Mental Health Professional Risk Assessment and Referral Procedures
  - The actions taken by school staff members trained in suicide risk assessment and intervention.

92

School-Based Suicide Intervention

- General Staff Procedures for Responding to a Suicide Threat
  - **A student who has threatened suicide must be carefully observed at all times** until a qualified staff member can conduct a risk assessment. The following procedures are to be followed whenever a student threatens to commit suicide.

93

School-Based Suicide Intervention

- General Staff Procedures for Responding to a Suicide Threat
  1. Stay with the student or designate another staff member to supervise the youth constantly and without exception until help arrives.
  2. Under no circumstances should you allow the student to leave the school.
  3. Do not agree to keep a student's suicidal intentions a secret.
  4. If the student has the means to carry out the threatened suicide on his or her person, determine if he or she will voluntarily relinquish it. **Do not force the student to do so. Do not place yourself in danger.**

94

School-Based Suicide Intervention

- General Staff Procedures for Responding to a Suicide Threat (continued)
  5. Take the suicidal student to the prearranged room.
  6. Notify the Crisis Intervention Coordinator immediately.
  7. Notify the Crisis Response Coordinator immediately.
  8. Inform the suicidal youth that outside help has been called and describe what the next steps will be.

95

School-Based Suicide Intervention

- Mental Health Professional Risk Assessment and Referral Procedures
  - Whenever a student judged to have some risk of engaging in self-directed violence or suicide, a school-based mental health professional should conduct a risk assessment and make the appropriate referrals.

96

School-Based Suicide Intervention

- Mental Health Professional Risk Assessment and Referral Procedures
  1. Identify Suicidal Thinking
  2. From Risk Assessment Data, Make Appropriate Referrals
  3. Risk Assessment Protocol
     a) Conduct a Risk Assessment.
     b) Consult with fellow school staff members regarding the Risk Assessment.
     c) Consult with County Mental Health.

97

School-Based Suicide Intervention

- Mental Health Professional Risk Assessment and Referral Procedures
  4. Use risk assessment information and consultation guidance to develop an action plan. Action plan options are as follows:
     A. **Extreme Risk**
     B. **Crisis Intervention Referral**
     C. **Mental Health Referral**

98

School-Based Suicide Intervention

- Mental Health Professional Risk Assessment and Referral Procedures
  A. **Extreme Risk:** If the student has the means of his or her threatened suicide at hand, and refuses to relinquish such then follow the Extreme Risk Procedures.
     i. Call the police.
     ii. Calm the student by talking and reassuring until the police arrive.
     iii. Continue to request that the student relinquish the means of the threatened suicide and try to prevent the student from harming him-or herself.
     iv. Call the parents and inform them of the actions taken.

99

School-Based Suicide Intervention

- Mental Health Professional Risk Assessment and Referral Procedures
  B. **Crisis Intervention Referral:** If the student's risk of harming him or herself is judged to be moderate to high then follow the Crisis Intervention Referral Procedures.
     i. Determine if the student's distress is the result of parent or caretaker abuse, neglect, or exploitation.
     ii. Meet with the student's parents.
     iii. Determine what to do if the parents are unable or unwilling to assist with the suicidal crisis.
     iv. Make appropriate referrals.

100

School-Based Suicide Intervention

- Mental Health Professional Risk Assessment and Referral Procedures
  C. **Mental Health Referral:** If the student's risk of harming him or herself is judged to be low then follow the Mental Health Referral Procedures.
     i. Determine if the student's distress is the result of parent or caretaker abuse, neglect, or exploitation.
     ii. Meet with the student's parents.
     iii. Make appropriate referrals.
  - Protect the privacy of the student and family.
  - Follow up with the hospital or clinic.

101

School-Based Suicide Intervention

A Risk Assessment and Referral Resource

Substance Abuse and Mental Health Services Administration. (2012). *Preventing suicide: A toolkit for high schools.* HHS Publication No. SMA-12-4669. Rockville, MD: Center for Mental Health Services, Author. Retrieved from http://store.samhsa.gov/shin/content//SMA12-4669/SMA12-4669.pdf

102

Part 7

School-Based Suicide Postvention

GOAL:
Increase your knowledge of how to respond to the aftermath of a suicide death.

103

School-Based Suicide Postvention

- "… the largest public health problem is neither the prevention of suicide nor the management of suicide attempts, but the alleviation of the effects of stress on the survivors whose lives are forever altered."

E.S. Shneidman
Forward to Survivors of Suicide
Edited by A. C. Cain
Published by Thomas, 1972

104

School-Based Suicide Postvention

Prevention and Preparedness

- Develop a district/school suicide prevention task force
- Develop policies and procedures
- Crisis team mandates provide foundation
- Components of a suicide prevention program include prevention (gatekeeper training; depression screening), intervention and postvention guidelines.
- Cultural responsiveness includes materials in native languages, interpreters, and understanding the rituals, customs and traditions of diverse populations.

105

Lieberman, Poland & Kornfeld (2014); Brock & Lieberman (2008)

School-Based Suicide Postvention

Why postvention in schools?

- Schools are often unsure about how to respond after a suicide and there has been debate as to best practice response.
- Certain practices may put some students at greater risk.
- An effective response can reduce the risk of suicide contagion and restore a safe, healthy learning environment.

106

School-Based Suicide Postvention

- Key Terms and Statistics
  - Suicide postvention
    - … is the provision of crisis intervention, support and assistance for those affected by a suicide death.
    - Affected individuals includes both "survivors" and other persons who were "exposed" to the death.

107

Andriessen & Krysinska (2012)

School-Based Suicide Postvention

- Key Terms and Statistics
  - Survivors of suicide
    - "the family members and friends who experience the suicide of a loved one" (McIntosh, 1993, p. 146).
    - "a person who has lost a significant other (or a loved one) by suicide, and whose life is changed because of the loss" (Andriessen, 2009, p. 43).
    - "… someone who experiences a high level of self-perceived psychological, physical, and/or social distress for a considerable length of time after exposure to the suicide of another person" (Jordan & McIntosh, 2011, p. 7).

108

School-Based Suicide Postvention

- Key Terms and Statistics
  - There is a distinction between "suicide survivorship" and "exposure to suicide."
    - Survivor applies to bereaved persons who had a personal/close relationship with the deceased.
    - Exposure applies to persons who did not know the deceased personally, but who know about the death through reports of others or media reports or who has personally witnessed the death of a stranger.

109

Andriessen & Krysinska (2012)

School-Based Suicide Postvention

- Key Terms and Statistics
  - Both survivors and exposed persons need support.
    - Survivors need…
      - support groups.
      - support from outside of the family.
      - to be educated about the complicated dynamics of grieving.
      - to be contacted in person (instead of by letter or phone).

110

Grad et al. (2004)

School-Based Suicide Postvention

How many survivors of suicide are there?

- Estimates vary greatly
  - Shneidman (1969) = 6 per suicide
  - Wrobleski (2002) = 10 per suicide
  - Berman (2011) = 45-80 per suicide

______ (*N* of Survivors per suicide) X 41,149 (Suicide Deaths (U.S. 2013)) = ______ (Suicide Survivors)

______ (*N* of Survivors per suicide) X 517,859 (Suicide Deaths (US 1999-2013)) = ______ (Suicide Survivors)

111

School-Based Suicide Postvention

- Special factors that make the postvention response a special and unique form of crisis intervention.
  1. Suicide contagion & clusters
  2. A special form of bereavement
  3. Social stigma
  4. Developmental differences
  5. Cultural differences

112

School-Based Suicide Postvention

1. Suicide contagion
   - "…a process by which exposure to the suicide or suicidal behavior of one or more persons influences others to commit or attempt suicide."
   - Contagion is rare, but…
     - "The effect of clusters appears to be strongest among adolescents."
     - A death by suicide or suicidal behavior in youth may increase the likelihood of suicidal ideation or attempts in other youth.
     - Contagion can lead to a cluster

113

O'Carroll & Potter (1994, April 22)

School-Based Suicide Postvention

1. Suicide Clusters
   - Multiple suicides within a defined geographical area within an accelerated time frame.
   - 1-5% of teenage deaths by suicide occur in a cluster (100-200 deaths annually).
   - Can occur in institutional settings such as psychiatric settings, schools, prisons, military.
   - Gould has identified 53 suicide clusters (defined as 3 to 11 victims, ranging in age from 11 to 20 years, within a year).
   - Victims appear to be influenced by earlier deaths, but do not necessarily "know" previous victims.

114

School-Based Suicide Postvention

1. Suicide contagion
   - Sonneck et al. (1994).
     - "Surveyed all suicide cases in Vienna, Austria that were reported in major daily newspapers and analyzed them in connection with subway suicide. …. The number of subway suicides in Vienna increased dramatically between 1984 and mid-1987. Based on the hypothesis that there was a connection between the dramatic way in which these suicides were reported and an increase in suicides and suicide attempts, the Austrian Association for Suicide Prevention developed media guidelines and initiated discussions with the media that culminated with an agreement to abstain from reporting on cases of suicide. Following the implementation of these guidelines in mid-1987, there was a 75% decrease in subway suicides that has been sustained for 5 yrs."

115

Sonneck et al. (1994, p. 453)

School-Based Suicide Postvention

1. Suicide contagion
   - Suicide rates increase when …
     - The number of stories about individual suicides increases
     - A particular death is reported at length or in many stories
     - The story of an individual death by suicide is placed on the front page or at the beginning of a broadcast
     - The headlines about specific suicide deaths are dramatic

116

American Foundation for Suicide Prevention (2001)

School-Based Suicide Postvention

1. Suicide contagion
   - Suicide rates increase when …
     - There has been unsafe messaging such as simplifying the causes of suicide
     - The death has been glorified
     - The death has been presented as a means for achieving a certain end (a tool to obtain a goal).

117

American Foundation for Suicide Prevention (2001)

School-Based Suicide Postvention

1. Suicide contagion
   - As a consequence of "contagion" suicide clusters have been reported.
     - A suicide cluster is "… a group of suicides or suicide attempts, or both, that occur closer together in time and space than would normally be expected in a given community."
     - How do you determine if you have a cluster?
       - Establish a baseline rate or percentage.

$$\frac{\text{Number of Suicides}}{\text{Population}} \times \text{selected proportion of population} = \text{Rate}$$

118

CDC (1998, August 19)

$$\frac{\text{Number of Suicides}}{\text{Population}} \times \text{selected proportion of population} = \text{Rate}$$

School-Based Suicide Postvention

Suicide rates and identifying clusters

- **19,180 US youth committed have suicide (1999-2013; ages 14-18 years)**
  - A nation-wide 14 year average of 1,370 suicides per year
    - Among 14-18 year olds, a nation-wide average annual rate of 6.04 per 100,000 individuals.

$$\frac{19{,}180}{317{,}333{,}193} \times 100{,}000 = 6.04$$

    - A 1,000 student high school can expect a suicide death about **once every 16 years** (.06 x 16 ≈ 1).

$$\frac{19{,}180}{317{,}333{,}193} \times 1{,}000 = 0.06$$

    - A 2,500 student high school can expect a suicide death about **once every 6.5 years** (.15 x 6.5 ≈ 1).

$$\frac{19{,}180}{317{,}333{,}193} \times 2{,}500 = 0.15$$

119

CDC (2015)

School-Based Suicide Postvention

1. Suicide contagion
   - Percent of US high school students with a self-reported attempt (in the 12 months prior to survey) that required medical attention

   - Annual overall average (2001-2013) = 2.5%

120

CDC (2014)

School-Based Suicide Postvention

- Centers for Disease Control Recommendations
  - Convene planning committee that involves all sectors of school and community.
  - Deliver a public response that minimizes sensationalism and avoids glorification.
  - Evaluate and counsel the close friends of the suicide victim and those previously know to be suicidal
  - Community resources must include: hospital and emergency personnel, community mental health, local and state agencies, clergy, school leaders, parent groups, survivor groups, police, media and crisis hotline personnel.

CDC Recommendations for a Community Plan for the Prevention and Containment of Suicide Clusters. (1988). *MMWR, 37*(S-6),1-12.

121

School-Based Suicide Postvention

Mass clusters

- Mass clusters are media related and grouped more in time than space and are in response to the media coverage of actual or fictional suicides.
- Research shows stronger effect for actual versus fictional media coverage and the term "Werther effect" has been around for nearly a century.

122

School-Based Suicide Postvention

Point Clusters

- Occur locally and victims are contiguous in space and time
- Social connections through internet etc. greater than ever before and vulnerable individuals are likely to form relationships with each other
- Research has found 75% of point cluster victims to have had a major psychiatric disorder

123

School-Based Suicide Postvention

- Factors that make the postvention response a special and unique form of crisis intervention.
  1. Suicide contagion & clusters
  2. A special form of bereavement
  3. Social stigma
  4. Developmental differences
  5. Cultural differences

124

School-Based Suicide Postvention

2. A special form of bereavement
   - Survivors report …
     - Guilt and shame
     - More depression and complicated grief
       - Less vitality and more pain
     - Social stigma, isolation, and loneliness
     - Poorer social functioning, and physical/mental health
     - Searching for the meaning of the death
     - Being concerned about their own increase suicide risk

Cain (1972); De Groot et al. (2006)

125

School-Based Suicide Postvention

2. A special form of bereavement
   - Multiple levels of grief reactions
     - a) Common grief reactions
       e.g., sorrow, yearning to be reunited
     - b) Unexpected death reactions
       e.g., shock, sense of unreality
     - c) Violent death reactions
       e.g., traumatic stress
     - d) Unique suicide reactions
       e.g., anger at deceased, feelings of abandonment

Jordan & McIntosh (2011)

26

School-Based Suicide Postvention

- Factors that make the postvention response a special and unique form of crisis intervention.
  1. Suicide contagion & clusters
  2. A special form of bereavement
  3. Social stigma
  4. Developmental differences
  5. Cultural differences

127

School-Based Suicide Postvention

3. Social Stigma
   - Both students and staff members may be uncomfortable talking about the death.
   - Survivors may receive (and/or perceive) much less social support for their loss.
     - Viewed more negatively by others as well as themselves.
   - There may exist a reluctance to provide postvention services.

Jordan (2001); Roberts et al. (1998)

128

School-Based Suicide Postvention

3. Social Stigma
   - Suicide postvention is a unique crisis situation that must be prepared to operate in an environment that is not only suffering from a sudden and unexpected loss, but one that is also anxious talking openly about the death.

129

School-Based Suicide Postvention

- Factors that make the postvention response a special and unique form of crisis intervention.
  1. Suicide contagion & clusters
  2. A special form of bereavement
  3. Social stigma
  4. Developmental differences
  5. Cultural differences

130

School-Based Suicide Postvention

4. Developmental Differences
   - Understanding of suicide and suicidal behaviors increases with age.
     - Primary grade children appear to understand the concept of "killing oneself," they typically do not recognize the term "suicide" and generally do not understand the dynamics that lead to this behavior.
     - Around fifth grade that students have a clear understanding of what the term "suicide" means and are aware that it is a psychosocial dynamic that leads to suicidal behavior.
   - The risk of suicidal ideation and behaviors increases as youth progress through the school years.

Mishara (1999)

131

School-Based Suicide Postvention

- Factors that make the postvention response a special and unique form of crisis intervention.
  1. Suicide contagion & clusters
  2. A special form of bereavement
  3. Social stigma
  4. Developmental differences
  5. Cultural differences

132

School-Based Suicide Postvention

5. Cultural Differences
   - Attitudes toward suicidal behavior vary considerably from culture to culture.
   - While some cultures may view suicide as appropriate under certain circumstances, other have strong sanctions against all such behavior.
   - These cultural attitudes have important implications for both the bereavement process and suicide contagion.

Ramsay et al. (1999)

133

School-Based Suicide Postvention

1. Verify the death
2. Mobilize the Crisis Team
2. Assess impact & determine response
4. Notify affected school staff members
5. Contact the deceased's family
6. Determine what to share
7. Determine how to inform others
8. Identify crisis intervention priorities
9. Faculty planning session
10. Provide crisis intervention services
11. Ongoing daily planning sessions
12. Memorials
13. Social Media
14. Debrief

American Foundation for Suicide Prevention et al. (2011)

134

School-Based Suicide Postvention

Goals

- Assist survivors in the grief process.
- Identify and refer individuals who may be at risk following the suicide.
- Provide accurate information while minimizing the risk of suicide contagion.
- Implement ongoing prevention efforts.

135

School-Based Suicide Postvention

Practical Suggestions

- Intervene only when indicated.
- Do not inform staff or students by intercom.
- Triage staff and make appropriate notification in person (not by memo or e mail).
- Have substitutes to relieve staff during the day.
- Facilitate social support systems for HS/Secondary students.

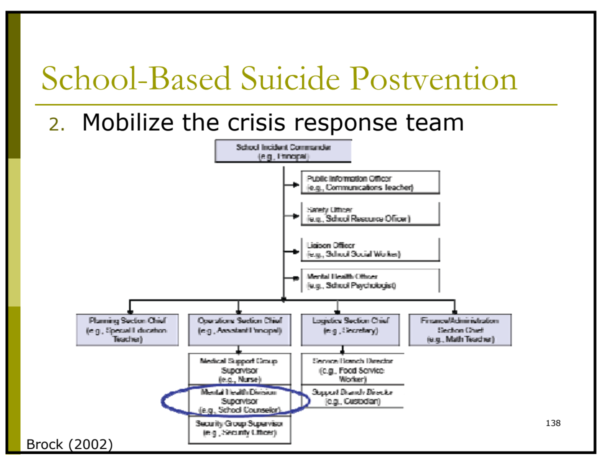
136

School-Based Suicide Postvention

1. Verify that a death has occurred
   - Confirm the cause of death
     - Confirmed suicide
     - Unconfirmed cause of death

137

Brock (2002)



Stephen E. Brock, PhD, NCSP, LEP
Richard Lieberman, NCSP
Susan K. Coats, EdD, LEP

School-Based Suicide Postvention

3. Assess the suicide's impact on the school and estimate the level of response required.
   - The importance of accurate estimates.
     - Make sure a postvention is truly needed before initiating this intervention.
   - Temporal proximity to other traumatic events (especially suicides).
   - Timing of the suicide.
   - Physical and/or emotional proximity to the suicide.

Brock (2002)

139

School-Based Suicide Postvention

4. Notify other involved school staff members.
   - Deceased student's teachers (current an former)
   - Any other staff members who had a relationship with the deceased
   - Teachers and staff who work with suicide survivors.

Brock (2002)

140

School-Based Suicide Postvention

5. Contact the family of the suicide victim within 24 hours of the death.
   - Purposes include…
     - Express sympathy.
     - Offer support.
     - Identify the victim' s friends who may need assistance.
     - Discuss the school' s postvention response.
     - Identify details about the death that could be shared with outsiders.
     - Discuss funeral arrangements and whether the family wants school personnel and/or students to attend.

Brock (2002); American Foundation for Suicide Prevention et al. (2011)

141

School-Based Suicide Postvention

6. Determine **what** information to share about the death
   - Several different communications may be necessary
     - When the death has been ruled a suicide
     - When the cause of death is unconfirmed
     - When the family has requested that the cause of death not be disclosed
     - Templates provided in *After a Suicide: A Toolkit for Schools*

Sample Death Notification Statement for Students

Brock (2002); American Foundation for Suicide Prevention et al. (2011)

142

School-Based Suicide Postvention

6. Determine **what** information to share about the death
   - Avoid detailed descriptions of the suicide including specific method and location.
   - Avoid over simplifying the causes of suicide and presenting them as inexplicable or unavoidable.
   - Avoid using the words "committed suicide" or "failed suicide."
   - Always include a referral phone number and information about local crisis intervention services
   - Emphasize recent treatment advances for depression and other mental illness.

Brock (2002); American Foundation for Suicide Prevention et al. (2011)

143

School-Based Suicide Postvention

7. Determine **how** to share information about the death.
   - Reporting the death to students…
     - Avoid tributes by friends, school wide assemblies, sharing information over PA systems that may romanticize the death
       - Positive attention given to someone who has died (or attempted to die) by suicide can lead vulnerable individuals who desire such attention to take their own lives.
       - Provide information in small groups (e.g., classrooms).

Brock, 2002

144

School-Based Suicide Postvention

7. Determine **how** to share information about the death.
   - Reporting the death to the media...
     - It is essential that the media not romanticize the death.
     - The media should be encouraged to acknowledge the pathological aspects of suicide.
     - Photos of the suicide victim should not be used.
     - “Suicide" should not be placed in the caption .
     - Include information about the community resources.
     - Sample media statement provided in *After a Suicide: A Toolkit for Schools*

145

Brock, 2002; American Foundation for Suicide Prevention et al. (2011)

School-Based Suicide Postvention

7. Determine **how** to share information about the death.
   - Reporting the death to the media: Guidelines from the World Health Organization
     1. Suicide is never the result of a single incident
     2. Avoid providing details of the method or the location a suicide victim uses that can be copied
     3. Provide the appropriate vital statistics (i.e., as indicated provide information about the mental health challenges typically associated with suicide).
     4. Provide information about resources that can help to address suicidal ideation.

146

Brock (2002); World Health Organization (2000)

School-Based Suicide Postvention

8. Identify students significantly affected by the suicide and initiate referral procedures.
   - Risk Factors for Imitative Behavior
     - ***Physically*** proximal to suicide
     - ***Emotionally*** proximal to victim
     - ***Psychologically vulnerable*** due to history of depression; previous suicidal behavior; suicide in family; history of trauma or loss.

147

Brock (2002); Brock & Sandoval (1996)

School-Based Suicide Postvention

8. Identify students significantly affected by the suicide and initiate referral procedures.
   - Risk Factors for Imitative Behavior
     - Facilitated the suicide.
     - Failed to recognize the suicidal intent.
     - Believe they may have caused the suicide.
     - Had a relationship with the suicide victim.
     - Identify with the suicide victim.
     - Have a history of prior suicidal behavior.
     - Have a history of psychopathology.
     - Shows symptoms of helplessness and/or hopelessness.
     - Have suffered significant life stressors or losses.
     - Lack internal and external resources

148

Brock (2002); Brock & Sandoval (1996)

School-Based Suicide Postvention

Re-entry guidelines for students identified at risk for suicide.

- Have parent escort student back to school first morning following hospitalization and conduct re-entry meeting.
- Collaborate with members of crisis team.
- Obtain any records from hospital and have parent sign a release of information form.
- Provide interventions:
  - Modify academic programming as appropriate.
  - Identify on-going counseling resources at school or in the community.
  - Discover if student is on medications and monitor with parent consent.
  - Notify student’s teachers as appropriate.

149

School-Based Suicide Postvention

Re-entry guidelines for students identified at risk for suicide.

- Monitor student to make certain no bullying takes place in the classroom as many students may know the student was hospitalized
  - Such news often spread through social networking.
- Monitor social networking sites with cooperation of the parent.
- Check in frequently during the first week the student returns to school.

150

School-Based Suicide Postvention

Re-entry guidelines for students identified at risk for suicide.

- Safety planning
  - Follow up counseling plan.
  - Identify resources at school and in community.
  - Identify circle of adults at school and at home.
  - Identify peer supports.
  - Keep track of medications.
  - http://www.my3app.org/

151

School-Based Suicide Postvention

9. Conduct a faculty planning session.
   - Share information about the death.
   - Allow staff to express their reactions and grief..
   - Provide a scripted death notification statement for students.
   - Prepare for student reactions and questions
   - Explain plans for the day.
   - Remind all staff of the role they play in identifying changes in behavior and discuss plan for handling students who are having difficulty.
   - Brief staff about identifying and referring at-risk students as well as the need to keep records of those efforts.
   - Apprise staff of any outside crisis responders or others who will be assisting.
   - Remind staff of student dismissal protocol for funeral.
   - Identify which Crisis Response Team member has been designated as the media spokesperson and instruct staff to refer all media inquiries to him or her.

152

Brock (2002); American Foundation for Suicide Prevention et al. (2011)

School-Based Suicide Postvention

10. Initiate crisis intervention services
    a) Initial intervention options…
       - Individual psychological first aid.
       - Group psychological first aid.
       - Classroom activities and/or presentations.
       - Parent meetings.
       - Staff meetings.
    b) Walk through the suicide victim's class schedule.
    c) Meet separately with individuals who were proximal to the suicide.
    d) Identify severely traumatized and make appropriate referrals.
    e) Facilitate dis-identification with the suicide victim…
       - Do not romanticize or glorify the victim's behavior or circumstances.
       - Point out how students are different from the victim.
    f) Parental contact.
    g) Psychotherapy Referrals.

153

Brock (2002)

School-Based Suicide Postvention

12. Consider memorials
    - "A delicate balance must be struck that creates opportunities for students to grieve but that does not increase suicide risk for other school students by glorifying, romanticizing or sensationalizing suicide."

Center for Suicide Prevention (2004)

School-Based Suicide Postvention

12. Consider memorials
    - Strive to treat all student deaths the same way.
    - Encourage and allow students, with parental permission, to attend the funeral.
    - Reach out to the family of the victim.
    - Contribute to a suicide prevention effort in the community.
    - Develop living memorials, such as student assistance programs, that address risk factors in local youth.
    - Address spontaneous memorials on school grounds.

155

School-Based Suicide Postvention

12. Consider memorials
    - Prohibiting all memorials is problematic.
    - Recognize the challenge to strike a balance between needs of distraught students and fulfilling the primary purpose of education.
    - Meet with students and be creative and compassionate.
    - Spontaneous memorials should be left in place until after the funeral.
    - Avoid holding services on school grounds.

156

School-Based Suicide Postvention

12. Consider memorials
- Schools may hold supervised gatherings such as candlelight memorials.
- Monitor off campus gatherings.
- Student newspaper coverage should follow media reporting guidelines.
- Yearbook and graduation dedication or tributes should all be treated the same.
- Grieving friends and family should be discouraged from dedicating a school event and guided towards promoting suicide prevention.
- Permanent memorials on campus are discouraged.

157

School-Based Suicide Postvention

12. Consider memorials
- Do **NOT** . . .
  - send all students from school to funerals, or stop classes for a funeral.
  - have memorial or funeral services at school.
  - establish permanent memorials such as plaques or dedicating yearbooks to the memory of suicide victims.
  - dedicate songs or sporting events to the suicide victims.
  - fly the flag at half staff.
  - have assemblies focusing on the suicide victim, or have a moment of silence in all-school assemblies.

158

Brock & Sandoval (2006)

School-Based Suicide Postvention

12. Consider memorials
- **DO** . . .
  - something to prevent other suicides (e.g., encourage crisis hotline volunteerism).
  - develop living memorials, such as student assistance programs, that will help others cope with feelings and problems.
  - allow students, with parental permission, to attend the funeral.
  - Donate/Collect funds to help suicide prevention programs and/or to help families with funeral expenses
  - encourage affected students, with parental permission, to attend the funeral.
  - mention to families and ministers the need to distance the person who committed suicide from survivors and to avoid glorifying the suicidal act.

159

Brock & Sandoval (2006)

School-Based Suicide Postvention

13. Social Media
- Create a Social Media Manager to assist the Public Information Officer.
- Utilize students as "cultural brokers" to help faculty and staff understand their use of social media.
- Train students in gatekeeper role, and specifically identify what suicide risk looks like when communicated via social media.
- Have staff monitor social networks and provide safe messaging when important (this will require that districts not completely block these networks).
- Have parents get involved in their child's social media.

160

School-Based Suicide Postvention

13. Social Media
- Monitor for high risk students.
- Psycho-education: Make use of social media to post prevention messages, hotlines and community mental health resources.
- Give students specific helpful language to include when making use of social media.
- Work with YouTube and Facebook to take down messages, disturbing images or language.
- Utilize the Facebook application for concerns or issues with content.

161

School-Based Suicide Postvention

14. Debrief the postvention response.
- Goals for debriefing will include…
  - Review and evaluation of all crisis intervention activities.
  - Making of plans for follow-up actions.
  - Providing an opportunity to help interveners cope.

162

Brock (2002)

School-Based Suicide Postvention

14. Debrief the postvention response.
    - Prevention messaging for staff:Answering the difficult questions
      - Why did he/she do it?
      - What method did they use?
      - Why didn't God stop them?
      - Is someone or something to blame?
      - How do we prevent further suicides?
      - How should I feel towards suicide victim?

163

School-Based Suicide Postvention

Prevention Messaging for Administrators

- While suicide is widely known as preventable, sadly, some suicides cannot be prevented.
- The goal now is to reach out to everyone in the school community who might be in need of support and to identify those in need of referrals and local mental health resources.
- We want our students to know that under no circumstances is suicide an option. Help is available. If they are concerned about a friend they should never hold such information confidential and they should tell a trusted adult.

164

School-Based Suicide Postvention

Prevention Messaging for Administrators

- The legacy of survivors includes many questions that cannot be answered but a key to healing for many has been to become an advocate for suicide prevention efforts in the community they live in.
- There are very clear risk factors for suicide and they include a history of depression, alcohol and substance abuse, and recent losses. There are evidenced based treatments for all the risk factors of youth suicide.
- Children and teens are resilient and capable of recovery.

165

School-Based Suicide Postvention

- The person who dies by "suicide puts his psychological skeleton in the survivor's emotional closet; he sentences the survivor to deal with many negative feelings and more, to become obsessed with thoughts regarding the survivor's own actual or possible role in having precipitated the suicidal act or having failed to stop it. It can be a heavy load" (p. x).

Shneidman (1972)

Suicide Risk Assessment Summary Sheet

Instructions: When a student acknowledges having suicidal thoughts, use as a checklist to assess suicide risk. Items are listed in order of importance to the Risk assessment.

	Risk present, but lower	*Medium Risk*	*Higher Risk*
1. Current Suicide Plan A. Details B. How prepared C. How soon D. How (Lethality of method) E. Chance of intervention	 ____Vague. ____Means not available. ____No specific time. ____Pills, slash wrists. ____Others present most of the time.	 ____Some specifics. ____Has means close by. ____Within a few days or hours. ____Drugs/alcohol, car wreck. ____Others available if called upon.	 ____Well thought out. ____Has means in hand. ____Immediately. ____Gun, hanging, jumping. ____No one nearby; isolated.
2. Pain	____Pain is bearable. ____Wants pain to stop, but not desperate. ____Identifies ways to stop the pain.	____Pain is almost unbearable. ____Becoming desperate for relief. ____Limited ways to cope with pain.	____Pain is unbearable. ____Desperate for relief from pain. ____Will do anything to stop the pain.
3. Resources	____Help available; student acknowledges that significant others are concerned and available to help.	____Family and friends available, but are not perceived by the student to be willing to help.	____Family and friends are not available and/or are hostile, injurious, exhausted
4. Prior Suicidal Behavior of… A. Self B. Significant Others	 ____No prior suicidal behavior. ____No significant others have engaged in suicidal behavior.	 ____One previous low lethality attempt; history of threats. ____Significant others have recently attempted suicidal behavior.	 ____One of high lethality, or multiple attempts of moderate lethality. ____Significant others have recently committed suicide.
5. Mental Health A. Coping behaviors B. Depression C. Medical status D. Other Psychopathology	____History of mental illness, but not currently considered mentally ill. ____Daily activities continue as usual with little change. ____Mild; feels slightly down. ____No significant medical problems. ____Stable relationships, personality, and school performance.	____Mentally ill, but currently receiving treatment. ____Some daily activities disrupted; disturbance in eating, sleeping, and schoolwork. ____Moderate; some moodiness, sadness, irritability, loneliness, and decrease of energy. ____Acute, but short-term, or psychosomatic illness. ____Recent acting-out behavior and substance abuse; acute suicidal behavior in stable personality.	____Mentally ill and not currently receiving treatment. ____Gross disturbances in daily functioning. ____Overwhelmed with hopelessness, sadness, and feelings of helplessness. ____Chronic debilitating, or acute catastrophic, illness. ____Suicidal behavior in unstable personality; emotional disturbance; repeated difficulty with peers, family, and teacher.
6. Stress	____No significant stress.	____Moderate reaction to loss and environmental changes.	____Severe reaction to loss or environmental changes.
