

CASP WORKSHOP
DYSLEXIA

“WHEN WE KNOW BETTER, WE DO BETTER.” - MAYA ANGELOU

<https://bit.ly/fall-casp>

1

HOW TO FIND JANA

- 01 empowerlep.com
- 02 themindbydesign.com
- 03 INSTAGRAM AND FACEBOOK
[@empowerlep](https://www.instagram.com/empowerlep)
[@themindbydesign](https://www.instagram.com/themindbydesign)
- 04 jana@empowerlep.com
- 05 <https://bit.ly/fall-casp>

2

JANA PARKER

- School Psych 2006-2018
- School Neuropsych Cert 2010
- LEP 2011
- Private practice part time 2013-2019
- Program Specialist 2018-2022
- Mind by Design, Inc. 2020-present
- Empower LEP 2022-present

3

ACKNOWLEDGEMENTS BEFORE WE BEGIN

- 01 We are in a reading crisis.
- 02 The crisis is systemic.
- 03 There is a big Tier 1 problem.
- 04 Special education gets the fall out.
- 05 School psychologists can be CHANGE AGENTS.

4

SOME MAIN POINTS

- Learn more about reading.
- Evaluate to help solve the problem.
- Use tools strategically.
- Listen to kids read.
- Help at Tier 1 = evaluate less AND less kids with dyslexia.

5

AGENDA

- Case
- Reading Statistics
- Special Education
- Science of Reading
- SLD Eligibility and Dyslexia
- SLPs
- Assessment tools
- Assessment based on SOR components
- Cases
- Report Writing

6

Let's Listen

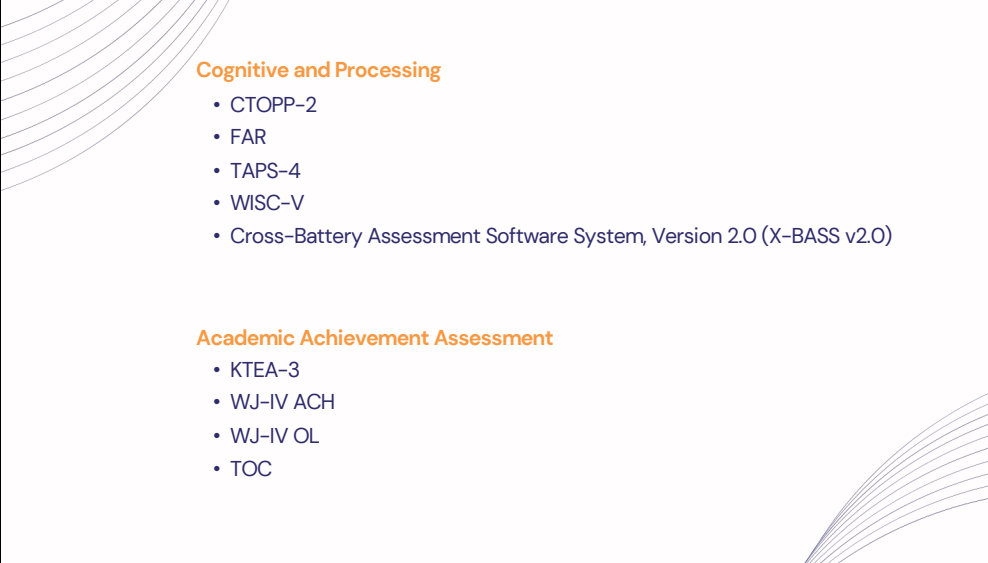

7

Alyssa

- Beginning 3rd grade
- Parent referred for reading
- Bright, motivated, social, works hard, and loves audio books
- Tier 2 since kinder, even through COVID
- Weak reading affects all subjects
- DIBELS data from 2nd and early 3rd grade continue to show "at-risk" meaning *needs intensive support*
- iReady 1st grade

8

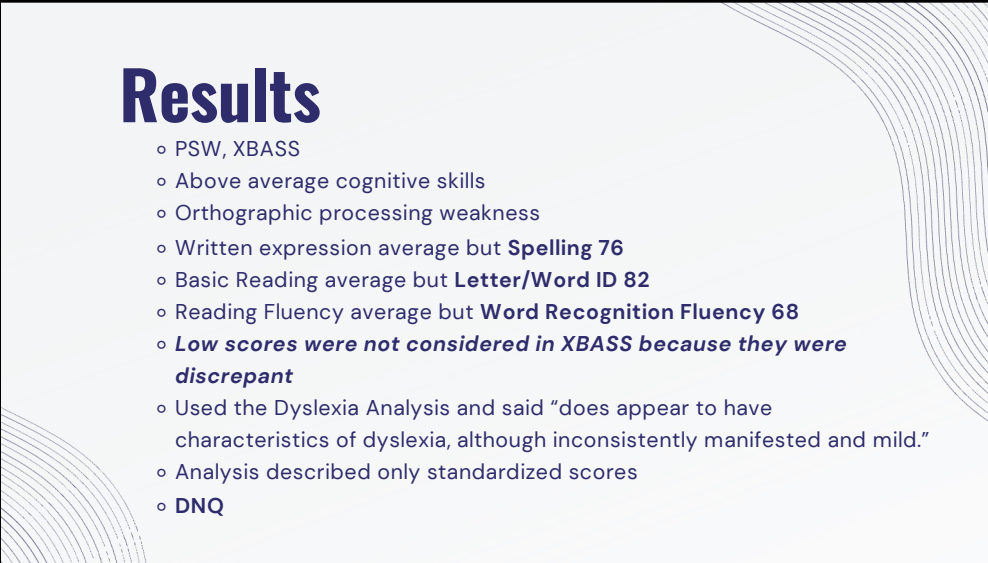

Cognitive and Processing

- CTOPP-2
- FAR
- TAPS-4
- WISC-V
- Cross-Battery Assessment Software System, Version 2.0 (X-BASS v2.0)

Academic Achievement Assessment

- KTEA-3
- WJ-IV ACH
- WJ-IV OL
- TOC

9

Results

- PSW, XBASS
- Above average cognitive skills
- Orthographic processing weakness
- Written expression average but **Spelling 76**
- Basic Reading average but **Letter/Word ID 82**
- Reading Fluency average but **Word Recognition Fluency 68**
- ***Low scores were not considered in XBASS because they were discrepant***
- Used the Dyslexia Analysis and said “does appear to have characteristics of dyslexia, although inconsistently manifested and mild.”
- Analysis described only standardized scores
- **DNQ**

10

UNILATERAL PLACEMENT IN SCHOOL FOR DYSLEXIA

Sometimes we aren't going deep enough.

- Bad for district
- Bad for student

11

READING STATISTICS

- Dyslexia is thought to affect between 5 and 20% of the population
- According to the National Center for Education Statistics:
 - 37% of California 4th graders can't read at a basic level
 - Percentage of below-basic readers is higher for low income (49%), Black (58%), Latino (47%), and those with disabilities (74%)

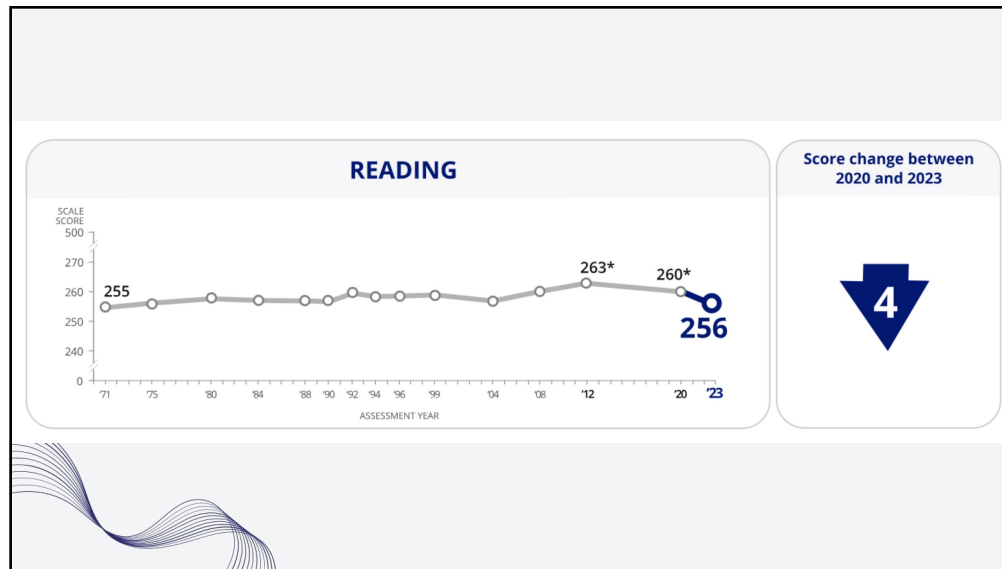

37%

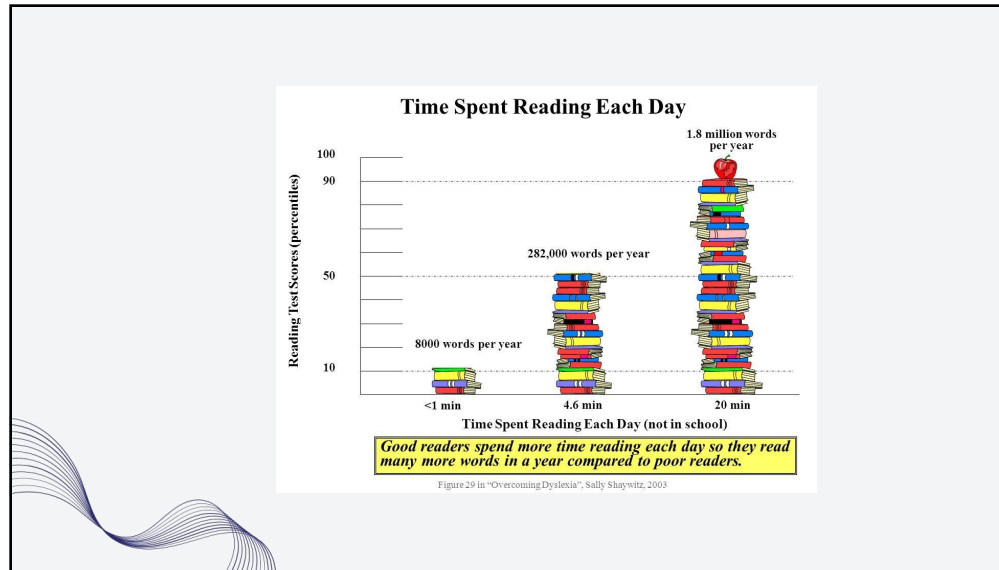

12

13

14

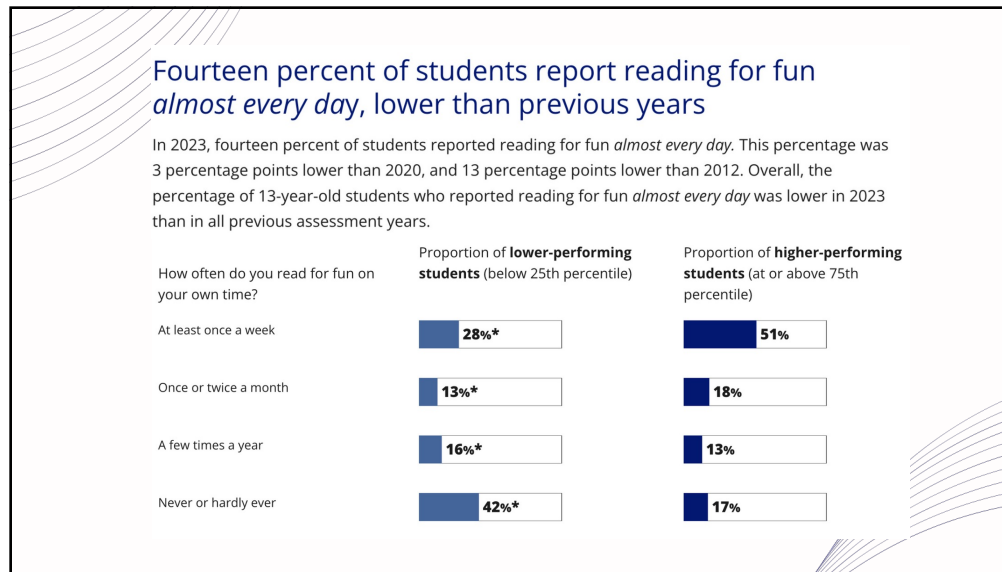

15

THE RISKS OF POOR READING

- Decreased vocabulary and background knowledge
- Increased risks: self-esteem, attendance, drop out, behavior
- Poverty, crime, prison

16

17

CALIFORNIA HAS BEEN SLOW MOVING

- 40 states have mandatory screening
- CA has guidelines
- 2021 screening bill
- Wait to Fail Model
- SB 691 requires screening K-2 (finally passed)

18

What is Special Ed supposed to do?

Close the achievement gap

Does it?

Not really

19

HOW SUCCESSFUL IS SPECIAL EDUCATION?

There is no evidence that most special education reading programs in public schools close the gap for students with dyslexia (Shaywitz, 2003)

Meaning: No data to show special ed closes the achievement gap

Despite a plethora of reading research and the development of evidence-based reading interventions, students with LD continue to show little improvement in the areas of reading and math (National Center for LD, The state of LD, 2014 Report)

Meaning: Even with all of the advances in research and intervention, data shows little improvement.

20

MAYBE THIS IS WHY...

21

WHY DO WE EVALUATE?

- Figure out what is going on and why
- Determine eligibility
- Use what we find to inform goals and services

So that we can...help students learn and catch up (whether they qualify for special ed or not!)

School psychologists and public education in general, are getting a bad rap because we aren't doing a good job explaining to parents OR supporting students in all Tiers.

22

Recent Facebook post by a parent...

I need some guidance. I have an IEP meeting scheduled for my son that is currently receiving speech therapy. I requested that he be assessed for a specific learning disability and other health impairment. It is clear to me that my son has dyslexia, ADD and dysgraphia. I received the draft report with recommendations. They stated he does not meet the criteria for specific learning disability or other health impairment bc his academic achievement was measured to be within the broad average range. [REDACTED]

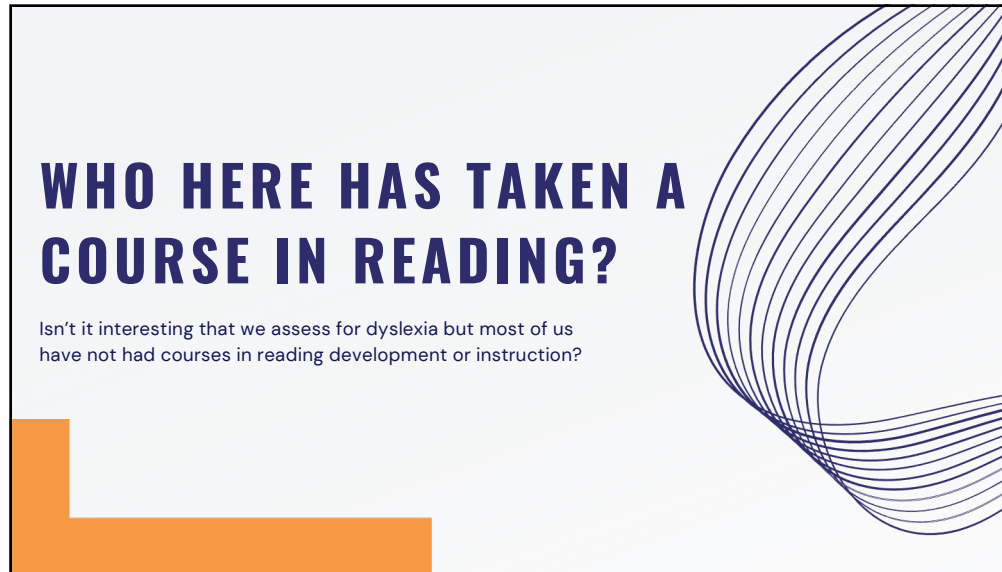

23

Psych report I read this week:

"Although T presents with inattention and academic achievement deficits in basic reading skills (74), written expression (78) and math problem solving (75), she does not demonstrate a significant discrepancy utilizing **alternative measures**. T **does not** meet the eligibility criteria as a student with a Specific Learning Disability at this time."

- Parent had no idea her daughter has dyslexia (and more).
- Summary made no mention of how this determination was made using "alternative measures."
- Student had strengths in Verbal Immediate Memory (97) and Picture Memory (9).
- CTOPP 2 showed significant weakness (PA 65) among several other areas of weakness.
- Criteria met for OHI but how was it not SLD?
- Most important is that parent did not understand the evaluation and what her daughter needs.

24

WHO HERE HAS TAKEN A COURSE IN READING?

Isn't it interesting that we assess for dyslexia but most of us have not had courses in reading development or instruction?

This slide features a light gray background with a decorative graphic of blue wavy lines on the right side and an orange L-shaped graphic in the bottom-left corner.

25

SCIENCE OF READING

School Psychs need to know about reading

This slide has a dark blue background with decorative orange wavy lines on the left and right sides.

26

Science of Reading

- The term Science of Reading simply means that that instructional and intervention methods acknowledge decades of interdisciplinary scientific research about how our brains develop reading and writing skills

27

SCIENCE OF READING AND THE BRAIN

- Our brains are wired for **language, not reading**
- We need to learn **all** of the sound correspondences and spelling exceptions **explicitly**
- The brain changes with practice

28

THE NATIONAL READING PANEL (2000)

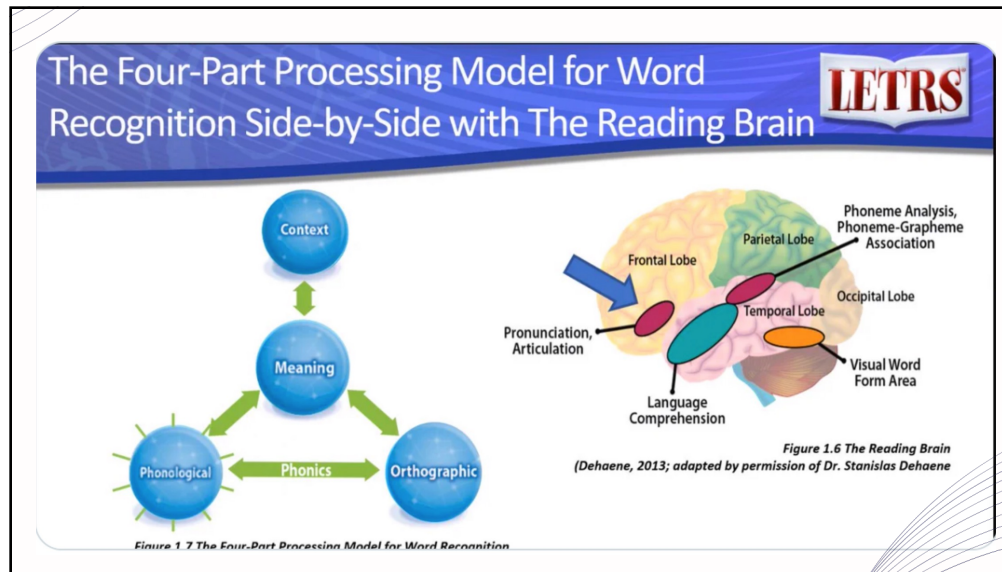

- 5 components of **effective reading instruction**
- **Instruction must be structured, systematic, and explicit**
- Grades K-1--Better Outcomes (than older students)
- Grades 2-6--Response not as strong as younger students

29

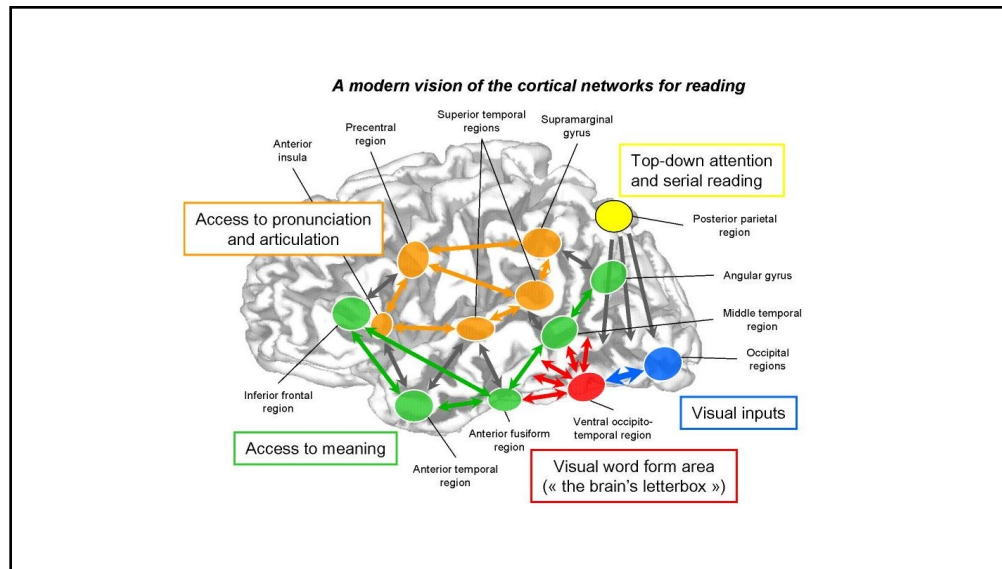

EXPLICIT, DIRECT TEACHING OF THE FIVE PILLARS OF LITERACY, STRUCTURED LITERACY, LEVELS THE PLAYING FIELD AND GREATLY REDUCES EXPECTANCY BIAS AND LEARNERS BIAS.

 PHONEMIC AWARENESS	 PHONICS	 FLUENCY	 VOCABULARY	 COMPREHENSION
<p>THE ABILITY TO HEAR, IDENTIFY, AND MANIPULATE SOUNDS IN SPOKEN WORDS.</p>	<p>RECOGNIZING THE RELATIONSHIP BETWEEN SOUNDS AND LETTERS, LETTER COMBINATIONS, AND WORDS</p>	<p>THE ABILITY TO READ WITH SPEED, ACCURACY, AND APPROPRIATE EXPRESSION.</p>	<p>UNDERSTANDING WORDS, THEIR DEFINITIONS, AND THEIR CONTEXT.</p>	<p>LEARNING TO UNDERSTAND AND MAKE MEANING OF A WIDE VARIETY OF TEXTS.</p>
<p>Phonemic Awareness is the most sophisticated and essential element. It is the most reliable predictor of later reading achievement.</p>	<p>Phonics is the ability to decode words accurately and automatically, reducing the cognitive load and liberating the reader to use more mental energy for comprehension.</p>	<p>Fluency is the bridge between decoding and comprehension.</p>	<p>Readers need to understand 98% of the words they read to comprehend what they are reading.</p>	<p>Comprehension is not an automatic or passive process, but one that is highly interactive and planned.</p>

30

31

32

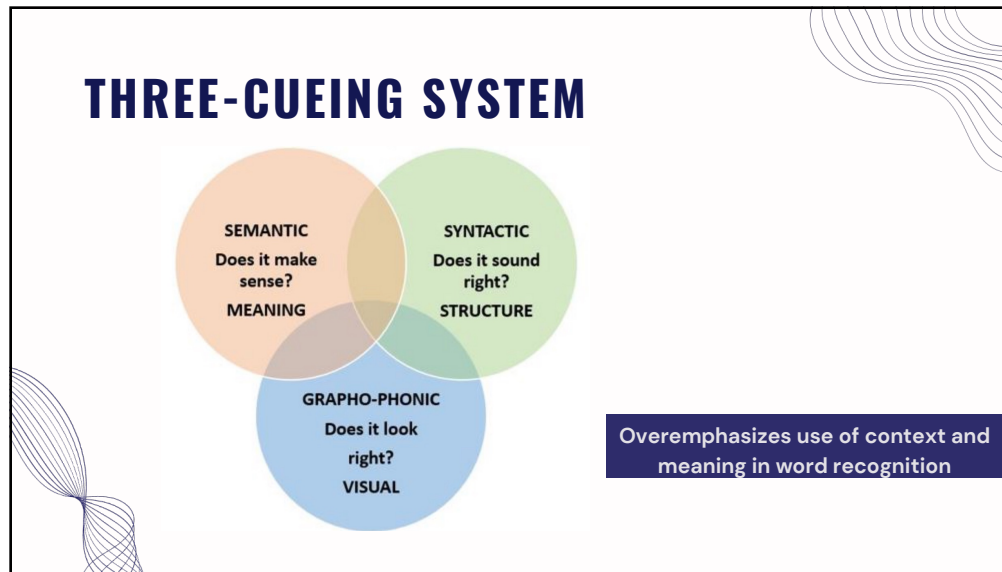

33

READING WARS

“Whole Language” vs Science of Reading

- Whole Language—immerse them in rich text and they will learn to read
 - Phonics will inhibit them from loving reading
- National Reading Panel (2000)—**kids need phonics**
- **Became “balanced literacy”** or “whole language” repackaged
- Many of our schools are still using these curricula

34

35

Case Study: JW March 2nd grade

- Sight word reading, fluency, and spelling
- Reading Recovery in 1st grade
- Didn't "pass" RR so stayed in one on one sessions through 1st grade
- 2nd grade, Word Study and LLI
- SST in October, goal of Level 16 instructional
- SST in December, goal surpassed (instructional 18)
- Word Study also advanced
-making good progress in Tier 2

36

Case Study: History Continued

- By March (4th SST), still at independent Level 18 (benchmark 24)
- Continued concerns in reading and writing
- Comprehension good but reading rate slow
- LLI 5 times per week small group, guided reading 3–5 times per week
- Parents requested assessment
- During assessment, independent reading at 20 and instructional 24

37

Feifer Assessment of Reading (FAR)		
FAR Composites (Subtests Composing Cluster)	Standard Score	Percentile
Phonological Index (PI)	98	45 th
Fluency Index (FI)	90	25 th
Comprehension Index (CI)	97	42 nd

FAR subtests	Standard Score
Phonemic Awareness	114
Nonsense Word Decoding	95
Isolated Word Reading Fluency	84
Oral Reading Fluency	80
Positioning Sounds	120
Rapid Automatic Naming	94
Verbal Fluency	117
Visual Perception	88
Irregular Word Reading Fluency	81
Orthographical Processing	86
Semantic Concepts	109
Word Recall	108
Morphological Processing	90
Silent Reading Fluency: Comprehension (SRF-C)	83
Silent Reading Fluency: Rate (SRF-R)	88

38

DNQ

- Not eligible under SLD
- Cognitive and achievement “average” and no processing weaknesses
- Low average reading fluency
- ½ year behind benchmark due to reading speed
- Comprehension good
- Good progress in Tier 2 so why change it?
- Recommend continued Tier 2 support and reading for fluency at home

39

May 3rd Grade

- 2 more SSTs
- Math concerns and continued reading fluency issues
- Word problems, abstract math concepts, math facts problematic
- Fast Forward at home
- Continued LLI 3 days per week
- Reading improving but still a struggle
- Parents request another assessment

40

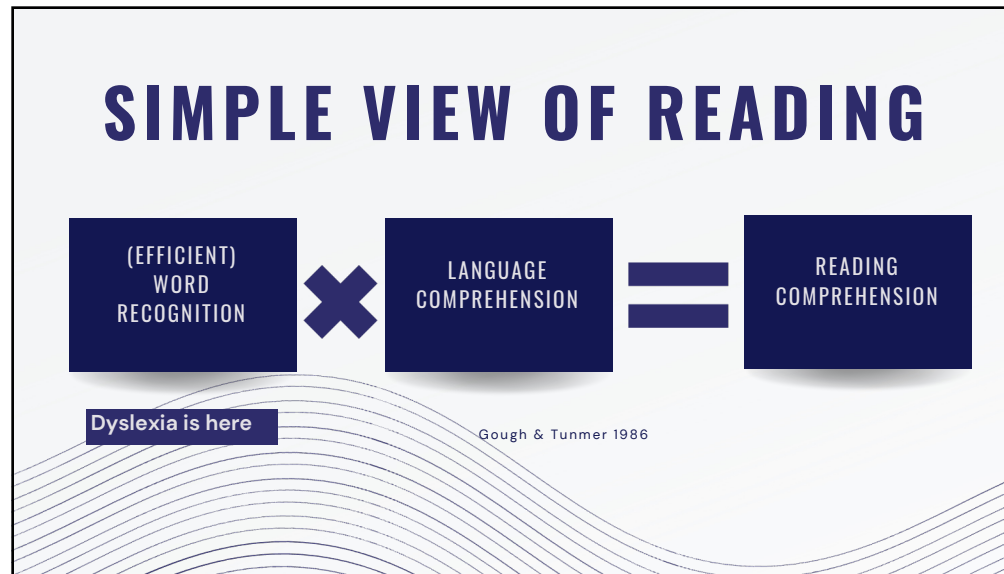

Feifer Assessment of Reading (FAR)		
FAR Composite	Standard Score	Percentile
Fluency Index (FI)	87	19 th
FAR subtests		
	Standard Score 2017	2016
Isolated Word Reading Fluency	94	84
Oral Reading Fluency	90	80
Rapid Automatic Naming	88	94
Verbal Fluency	108	117
Visual Perception	73	88
Irregular Word Reading Fluency	83	81
Orthographical Processing	102	86
Silent Reading Fluency: Comprehension (SRF-C)	92	83
Silent Reading Fluency: Rate (SRF-R)	90	88

41

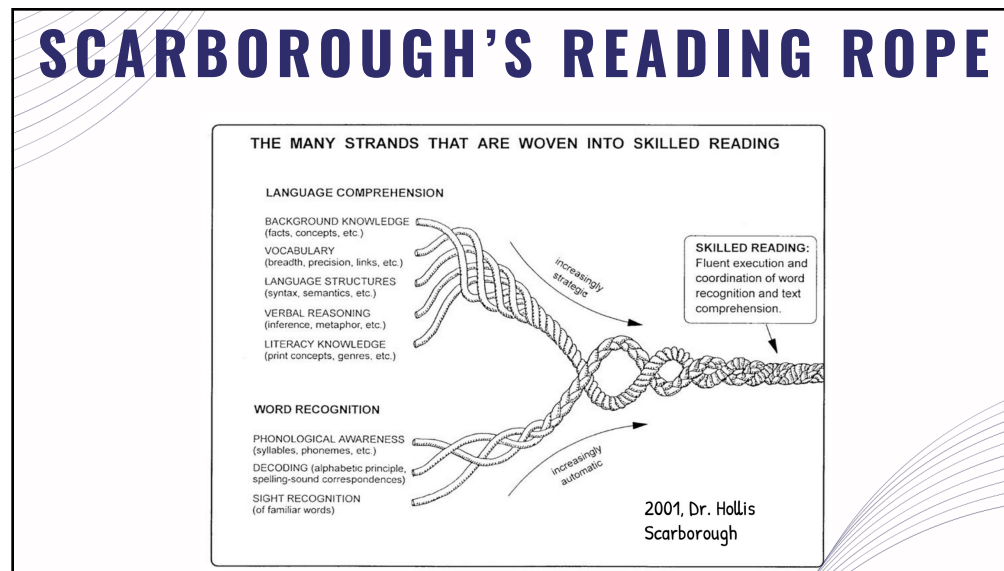

Ultimately eligible...

- Did we fail him?
- What could we have done differently?
- Orthography, reading fluency, spelling still impacted, now affecting comprehension, in other subjects

42

43

44

45

SKILLED READERS

- Attune to every letter in a word
- Recognize familiar words automatically
- Sound out unfamiliar words
- Learn new words by reading

A decorative graphic consisting of several thin, curved lines that sweep across the right and bottom corners of the slide, creating a sense of movement and depth.

46

POOR READERS

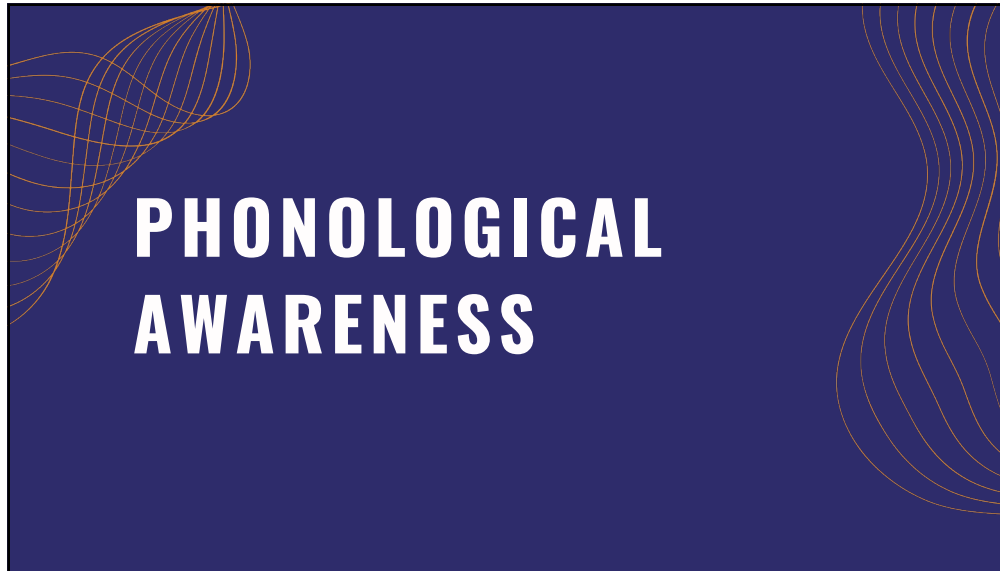

- Guess at a word that makes sense in the sentence
- Guess a word based on the first letter or two
- Skip words they don't know

47

Bottom of the Reading Rope

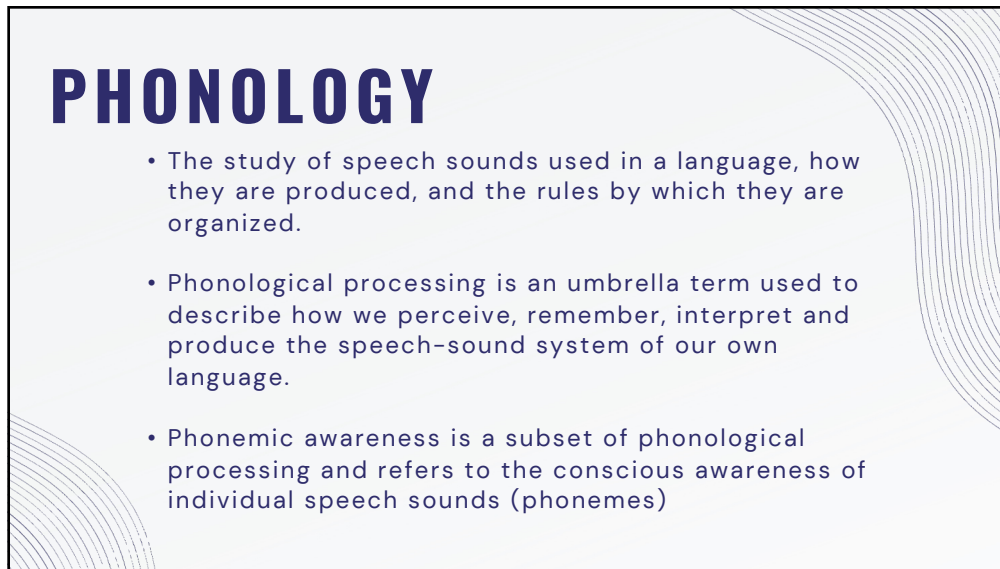

Phonological Awareness, Decoding, and Sight Word Recognition

48

PHONOLOGICAL AWARENESS

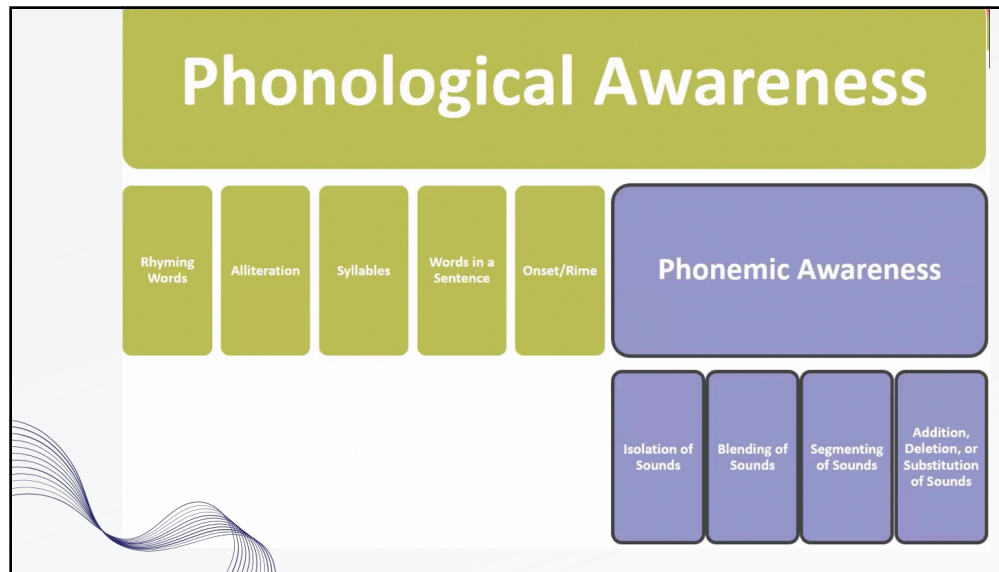

49

PHONOLOGY

- The study of speech sounds used in a language, how they are produced, and the rules by which they are organized.
- Phonological processing is an umbrella term used to describe how we perceive, remember, interpret and produce the speech-sound system of our own language.
- Phonemic awareness is a subset of phonological processing and refers to the conscious awareness of individual speech sounds (phonemes)

50

51

PHONEMIC AWARENESS

The conscious ability to identify and manipulate individual phonemes in words (**quickly**)

Very strong predictor in K/1 students for future reading success

Examples:

- What is the first sound in the word genre?
- Say 'smoke' but instead of /m/, say /t/

When we evaluate, get a measure of untimed and timed!

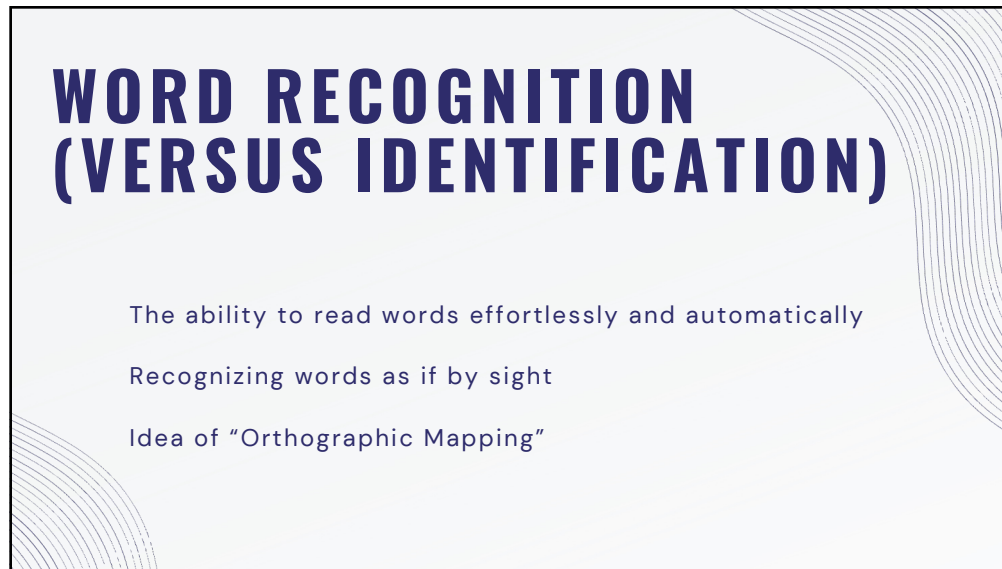

52

DECODING AND SIGHT RECOGNITION

Phonics and Orthography

53

WORD RECOGNITION (VERSUS IDENTIFICATION)

The ability to read words effortlessly and automatically

Recognizing words as if by sight

Idea of "Orthographic Mapping"

54

ORTHOGRAPHIC MAPPING AND LEXICAL QUALITY HYPOTHESIS

Linnea Ehri

Glueing a word's spelling,
pronunciation and
meaning into memory,
requiring phonemic
awareness and letter-
sound knowledge

Charles Perfetti

The deeper the
understanding of a
word, the better able
we are to
orthographically map
the word

55

Phonetically spelled words

Regular words

Irregularly spelled words

"Heart Words"

High Frequency Words

SIGHT WORDS

56

57

PHONICS/PHONETICS

- The system of phoneme/grapheme associations
 - (sound/letter associations)
- Grapheme: 1-4 letters used to represent a phoneme
 - b, oo, eigh

58

WEAK PHONICS

Poor phonics: decoding and encoding words or pseudowords not according to allowable patterns

- Spelling 'lik' or 'lick' for *like*

Poor phonology: not attempting to represent every sound in a word

- Spelling 'loger' for *longer*

59

ORTHOGRAPHY

- The writing system used to represent language
 - The one correct way we spell a particular word
 - Includes permissible spelling patterns and constraints
 - Can be deep/opaque (English) or shallow/transparent (Spanish)

60

WEAK ORTHOGRAPHY

- Still having to sound out common words (like, then, want) that should have been mapped into sight words
- Confusing homophone spellings
- Spelling phonetically, but not the one correct way we spell a word.

61

EXAMPLES

Yield
Silliness
Inefficient
Privilege

Yeild
sillyness
ineficient
priviledge

62

WEAK MORPHOLOGY

- Not understanding affixes and their meanings
 - Spelling 'askt' for *asked*

63

FLUENCY

Reading connected text with accurate and efficient word recognition, with appropriate prosodic features, at a rate conducive for comprehension

64

LANGUAGE

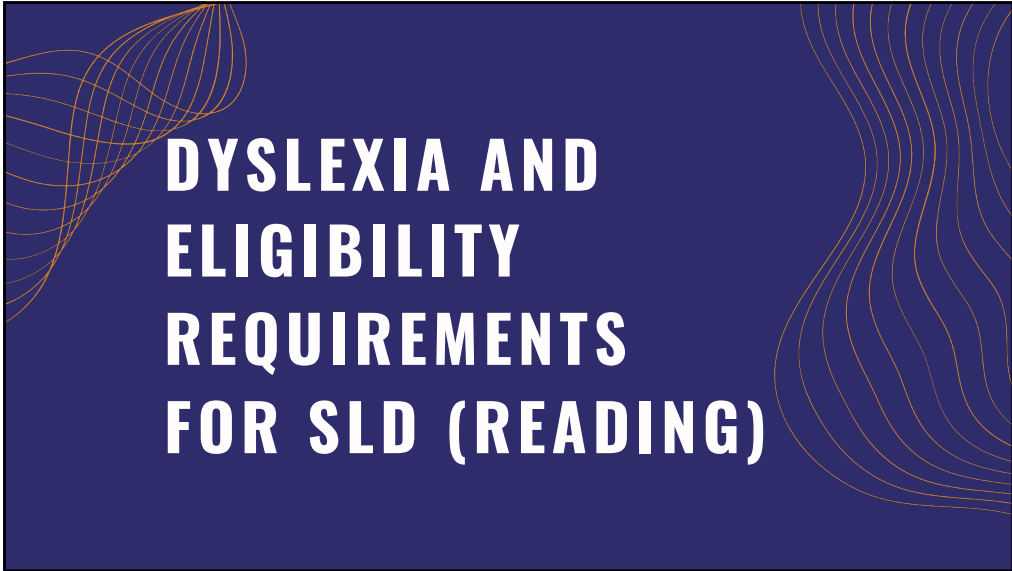

The integration of phonology, orthography, morphology, semantics, syntax, discourse, and pragmatics

Spoken and written modalities vary in complexity, organization, redundancy and length

65

BREAK

66

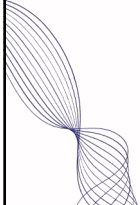

DYSLEXIA AND ELIGIBILITY REQUIREMENTS FOR SLD (READING)

67

Dyslexia may also be understood as one type of a “specific learning disability,” which is defined in California’s regulations pertaining to students who qualify for special education services. [Title 5, California Code of Regulations, Section 3030\(b\)\(10\)\(A\)](#) discusses specific learning disabilities and dyslexia as follows:

Specific learning disability means a disorder in one or more of the basic psychological processes involved in understanding or in using language, spoken or written, that may have manifested itself in the imperfect ability to listen, think, speak, read, write, spell, or to do mathematical calculations, including conditions such as perceptual disabilities, brain injury, minimal brain dysfunction, **dyslexia**, and developmental aphasia. The basic psychological processes include attention, visual processing, auditory processing, **phonological processing**, sensory-motor skills, cognitive abilities including association, conceptualization and expression . . . Specific learning disabilities do not include learning problems that are primarily the result of visual, hearing, or motor disabilities, of intellectual disability, of emotional disturbance, or of environmental, cultural, or economic disadvantage.

68

LETTERS

OSERS Dear Colleague Letter

- You can use the term, dyslexia
- <https://www2.ed.gov/policy/speced/guid/idea/memosdcltrs/guidance-on-dyslexia-10-2015.pdf>

OSEP Letter to Unnerstall

- You don't have to use the term dyslexia
- <https://www2.ed.gov/policy/speced/guid/idea/memosdcltrs/oseplettertounnerstall4-25-16dyslexia.pdf>

Remember:

Parents who disagree with an evaluation have the right to seek an IEE at public expense

69

CASP'S POSITION

- Teams can, and should assess for dyslexia
- Dyslexia does not equal special ed
- Potential for 504 Plan

70

MODELS FOR ELIGIBILITY

- Discrepancy Model—ability/achievement
- RTI
- PSW
- Problems with all 3 models
- **You need to use your clinical judgement and not over-rely on scores**

71

DYSLEXIA IS SIMPLY...

- A language-based disorder at the word level
 - Impacts word reading and spelling
 - Often reading comprehension and written expression
 - Usually involves phonological deficits
- See IDA and DSM 5 definitions

72

HOW SCHOOL PSYCHS OFTEN DESCRIBE “TYPES” OF DYSLEXIA

DYSPHONETIC

- Difficulty sounding out words in a phonological manner
- Trouble with phonetically spelled words

Dyslexia

SURFACE (ORTHOGRAPHIC)

- Difficulty with the rapid and automatic recognition of words in print
- Sight words
- Irregular words

Dyslexia

COMPREHENSION

- Mechanical side of reading is fine but difficulty persists deriving meaning from print

Language

73

ANOTHER WAY TO LOOK AT IT...

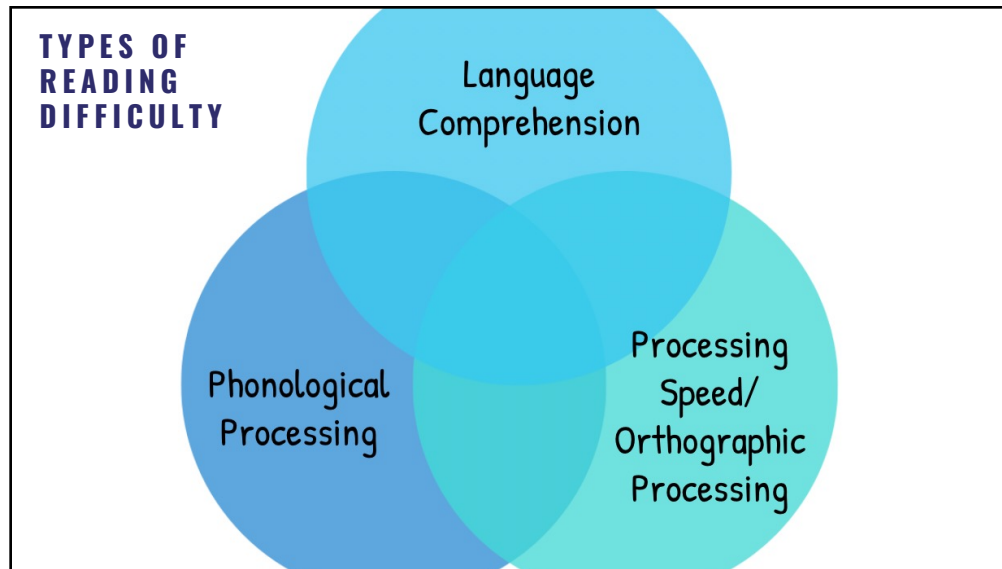

What part of the rope is breaking down?

74

WE NEED A TEAM APPROACH TO PLANNING AND EVALUATING (Psych, Sped, SLP)

75

76

ARE THE TOOLS WE USE GIVING US THE INFORMATION WE NEED?

To help determine eligibility AND most importantly,
inform intervention

77

WHAT DO WE USUALLY DO?

- School psychologist: cognitive and processing
- Special education teacher: achievement
- SLP: speech, language, pragmatics

78

TYPICAL TESTS (WHEN SUSPECTED READING SLD)

SCHOOL PSYCH

- WISC V, WJ IV Cog, KABC II
- CTOPP 2
- TAPS 4
- FAR
- WJ OL?

SPECIAL ED TEACHER

- WJ IV Achievement
- KTEA 3
- WIAT 4

Usually just core subtests?

SLP

- Potentially none

79

WHAT ARE THE AREAS WE EVALUATE THAT ARE RELATED TO READING?

SCHOOL PSYCH

- Phonemic Awareness
- Phonological Processing
- Auditory Memory
- Auditory Cohesion
- Rapid Automatic Naming
- Processing Speed
- Working Memory

SPECIAL ED TEACHER

- Letter-Word ID
- Reading Comp
- Reading Fluency
- (spelling)

SLP

- Phonological Awareness and Processing
- Semantics
- Syntax
- Figurative Language
- Inferencing

80

CASE EXAMPLE COMPREHENSION

- Referral concern: comprehension
- Psych has no academic scores yet
- Psych has input from multiple sources including reading specialist
 - Inferencing
- Psych: KABC II – low riddles
 - Everything else “average”
- Give a WRAML?
- Thinking about qualifying with “conceptualization” SLD
- My questions: language? Vocabulary? Inference?
- This is the 5th pillar. How do we get the information we need?

81

- 01 **GET FAMILIAR WITH
ACHIEVEMENT TESTS**
- 02 **Pull in SLP**
- 03 **Assess the reading rope
(as applicable)**

82

83

WHAT DO I WANT TO KNOW?

1. Did/does the student have speech articulation problems?
2. Can the student hear and manipulate sounds in words (quickly)?
3. Can the student rapidly name or process numbers, letters, etc?
4. Can the student decode real and nonsense words?
5. Can the student decode phonologically spelled words, irregularly spelled words, and nonsense words QUICKLY?
6. Can the student spell real words and nonsense words? What kinds of errors are being made?
7. Is the student's oral reading accurate, efficient, and fluent?
8. Is the student understanding what is being read?

84

START WITH ACHIEVEMENT

What is the referral question? *What* is the student struggling with?

- Parent input
- Info from classroom teacher (SST?)
- Curriculum-based measures
- Previous report cards
- Statewide assessments and district benchmarks
- Standardized achievement testing
 - More than core battery
- Don't over-rely on core battery!

85

DYSLEXIA BATTERY

- Does your assessment attend to all strands of the rope?
- What strands does it cover?
- What is missing?
- Who is testing what?

86

WHAT COULD YOUR SLP DO?

- Vocabulary
- Language Structures
- Verbal Reasoning
- Literacy Knowledge
- Phonological Awareness
- Decoding

87

TESTS I USE

- CBMs
- WJ IV Cog, Ach, OL
- CTOPP 2
- TAPS 4
- KTEA 3
- WIAT 4
- FAR
- FAW
- TILLS
- TOWRE 2
- GORT 5

88

CORE BATTERIES

- Woodcock Johnson IV (Cog, Ach, OL)
 - RPI is useful
- WISC V and WIAT 4 or KTEA 3

If you give the WJ IV, you hit most of the areas. You can then supplement with what's missing.

- *WJ does not have all of the reading fluency tests I like to give
- *WJ Bulletin 6 and Bulletin 8

Area Tested	Battery	Test Date	Cluster/Test
Cognitive Abilities: Possible Contributing Factors	Phonological Awareness	WJ IV COG	Auditory Processing
			Test 5: Phonological Processing
		Test 12: Nonword Repetition	
		WJ IV DL	Phonetic Coding
	Test 3: Segmentation		
	Test 7: Sound Blending		
	Orthographic Awareness	WJ IV COG	Test 4: Letter-Pattern Matching
			Test 11: Number-Pattern Matching
		WJ IV ACH	Test 1: Letter-Word Identification
			Test 3: Spelling
	Memory	WJ IV DL	Test 7: Word Attack
			Test 16: Spelling of Sounds
WJ IV COG		Auditory Memory Span	
		Test 5: Sentence Repetition	
Test 18: Memory for Words			
Short-Term Working Memory <input type="checkbox"/> Extended			
Rapid Naming	WJ IV DL	Test 3: Verbal Attention	
		Test 10: Numbers Reversed	
	WJ IV COG	Test 16: Object-Number Sequencing (Extended)	
		Speed of Lexical Access	
Processing Speed	WJ IV DL	Test 4: Rapid Picture Naming	
		Test 8: Retrieval Fluency	
	WJ IV COG	Cognitive Processing Speed (G5)	
		Test 4: Letter-Pattern Matching	
Test 17: Pair Cancellation			
WJ IV COG	Perceptual Speed		
	Test 4: Letter-Pattern Matching		
Test 11: Number-Pattern Matching

Table from Pearson Dyslexia Toolkit White Paper

92

SIDE NOTE

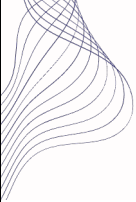

- We tend to use what is popular in the field
- We don't tend to look outside what we know

For example...

93

Section 2. Subtest Performance											
Subtests	Raw Score	Age Equivalent	%ile Rank	Scaled Score							
Core											
Rhyming (RHY)	12		9	6							
Segmentation (SEG)	10		5	5							
Isolation (ISO)	13		16	7							
Deletion (DEL)	15		63	12							
Substitution (SUB)	5		50	10							
Blending (BLE)	10		9	6							
Supplemental											
Phoneme-Grapheme Correspondence (PGC)	27		16	7							
Phonemic Decoding (PHD)											
Section 3. Composite Performance											
Composites	RHY	SEG	ISO	DEL	SUB	BLE	PGC	PHD	Sum of Scaled Scores	%ile Rank	Index Score
Phonological Awareness Index	6	5	7	12	10	6			46	14	84
Phoneme-Grapheme Index											

94

**Phonological Awareness Test, 2nd Edition, NU (PAT 2 NU)--
only goes up to 9 yrs From Proed website**

The test has six core subtests (Rhyming, Segmentation, Isolation, Deletion, Substitution, and Blending) that measure students' awareness of spoken syllables and phonemes in students ages 5 through 9 years of age. The test also has two supplemental subtests (Phoneme-Grapheme Correspondence and Phonemic Decoding) that measure students' knowledge of sound/symbol correspondence in isolation and in practice in students ages six years through nine years. The test is comprehensive and includes a wide variety of tasks; performance on each of these tasks has been correlated with success in early reading and spelling. The straightforward, developmental format lets you easily tease out specific skills and plan effective interventions.

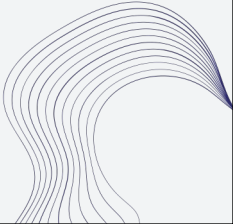

Subtests

- Rhyming: Discrimination and Production-identify rhyming pairs and provide a rhyming word
- Segmentation: Sentences, Syllables, and Phonemes-divide by words, syllables, and phonemes
- Isolation: Initial, Final, and Medial-identity sound position in words
- Deletion: Compound Words, Syllables, and Phonemes-manipulate root words, syllables, and phonemes in words
- Substitution with Manipulatives: isolate a phoneme in a word, then change in to another phoneme to form a new word
- Blending: Syllables and Phonemes blend units of sound to form new words
- Phoneme-Grapheme Correspondence: assesses knowledge of sound/symbol correspondence for consonants, vowels, consonant blends, consonant digraphs, r-controlled vowels, vowel digraphs, and diphthongs
- Phonemic Decoding: assesses general knowledge of sound/symbol correspondence to blend sounds into nonsense words

95

Subtests

Test of Language and Literacy Skills (TILLS)

96

OVERLAP BETWEEN TESTS

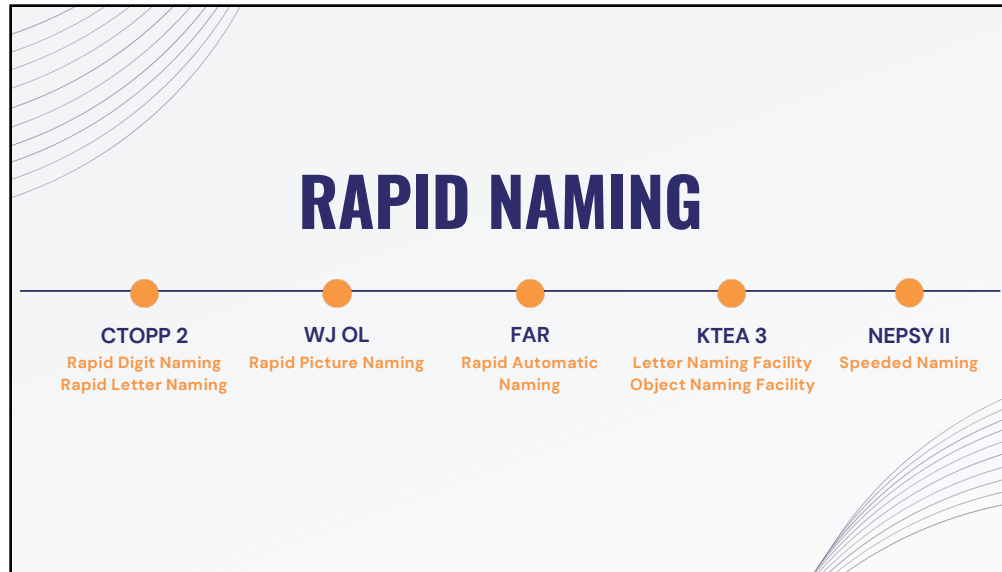

- Tests may have the same name or similar, but test something different
- Some tests are on the school psych's tests, the sped teacher's tests, and the SLP's tests
 - Don't repeat 3 times
 - Make sure your results are consistent OR explain the difference
- Know the difference and be strategic

97

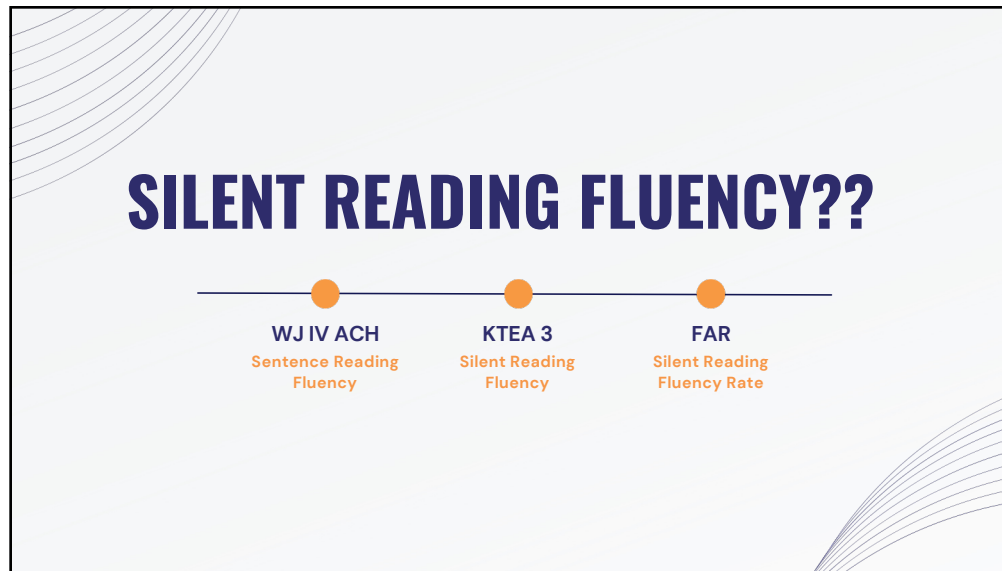

ACHIEVEMENT DOES **NOT** MEAN CORE BATTERY ONLY

- You need proficiency and "fluency" measures
- May fall under "processing" or "achievement"
- You need to use your clinical judgement
- If you can explain it, it's defensible
- Often "dyslexia" doesn't show up in core achievement battery

COMMUNICATE BEFORE, DURING, AND AFTER IEP

- Use each other to understand the student
- Analyze any discrepancies
- Don't hang your hat on assessment results
- Use all forms of data to inform eligibility decisions
- **If you can explain the what and the why, it's defensible**

120

121

OUR REPORTS NEED TO BE USEFUL AND ACCESSIBLE

Research says that useful reports

- Are understandable by the consumer
- Clearly answer the referral questions
- Provide clear and feasible individualized recommendations

122

NASP PRINCIPLES FOR PROFESSIONAL ETHICS (2010)

Reports should:

- Present findings in language clearly understood by the recipients
- Emphasize interpretation and recommendations
- Support the recipients in their work or interactions with the child

Interpretation of test data should be:

- Written in simple language
- Based on convergent and comprehensive assessment sources

Reports focused on test scores are rarely useful!

123

SAMPLE LANGUAGE

Brody's profile is consistent with dyslexia, related to orthographic deficiencies, which means he has difficulty rapidly recognizing words in print, as if by sight. His reading speed is slow due to limited orthographic mapping, which forces him to slow down to attempt to sound words out (even if they are words that do not follow a regular spelling pattern). Reading for Brody is not efficient or proficient. He then spends so much mental energy on word reading that it hinders comprehension of what is read.

124

SAMPLE LANGUAGE

Results of the FAR indicate that Alexis has both strengths and weaknesses in her phonological and orthographic processing. The Index scores therefore are not a representative indication of her skills. Previous assessment results suggest that Alexis has strong reading comprehension skills. She is able to pull meaning from text quite well.

On the Phonological Index of the FAR, Alexis's **strengths** were notable in:

- Identifying a missing sound in a word
- Demonstrating phonological awareness.

This means that Alexis understands sounds and phonemes that make up words, and she can rhyme, manipulate, segment, and blend sounds, phonemes and words. However, despite her solid phonological development, she does not use these skills consistently, quickly, or efficiently. Reading is slow and laborious.

Alexis's phonological **weaknesses** include:

- Reading nonsense words (Nonsense Word Decoding)
- Reading phonologically spelled words quickly (Isolated Word Reading Fluency)
- Reading passages that included phonologically spelled words quickly (Oral Reading Fluency)

125

...All other subtests of the Fluency Index were **weaknesses** for Alexis, and they include all of the subtests that require orthographic processing, rather than verbal fluency. Orthography is related to the visual processing of the printed word. Those who struggle with orthography typically read slower because they have difficulty recognizing words in print with speed and automaticity. Alexis struggled significantly with:

- Rapidly naming items and letters (Rapid Naming)
- Quickly identifying words that had backwards letters in them (Visual Perception)
- Reading irregularly spelled words quickly (Irregular Word Reading Fluency)
- Identifying groups of letters in a target word after only briefly seeing the whole word (Orthographical Processing)

Due to inconsistent use of phonemic skills to read and lack of automaticity and speed for reading, and, in comparison to Alexis's strong cognitive abilities, her reading challenges can certainly be considered unexpected.

126

Amy's reading profile shows she has both strengths and weaknesses. She has solid reading comprehension skills. Amy often uses her strong comprehension to guess at words she struggles to read. Amy is very engaged with interesting stories and facts, and I can tell she is able to use visual imagery to aide in her understanding while reading. Amy also has a strong vocabulary and listening comprehension skills. Whether she is reading or listening, as long as she is attending, Amy has no difficulty with comprehension, reasoning with information she reads, hears or sees, or connecting new concepts to previous experience and knowledge.

Amy demonstrates weaknesses in basic reading skills and fluency, demonstrated by both phonological and orthographic deficits. I believe these weaknesses are in part due to those cognitive processes, but are exacerbated by limited explicit instruction in early grades and Amy's attention processing and executive skill weaknesses (i.e. mental stamina, attention to detail, perseverance when reading, using skills she has on demand).

127

TAKEAWAYS

- Keep learning more about reading development
- Educate others, including parents
- Don't be afraid to use the word, "dyslexia"
- Be a change agent for your school and district
- Evaluate so you know not only if a student is eligible, but where the problems are so they can be supported
- Learn more about achievement batteries and support your special education teachers
- Be clear and transparent in your reports and in communication with parents
- If parents understand our results, they will question less and lean in more
